

DMT LLC provides comprehensive IT outsourcing services to manage the information technology infrastructure for small and mid-sized businesses. Our core value is providing Managed IT Services to our clients with a proactive system and network administration philosophy. Our clients depend on us to manage their systems, to enable business growth and to minimize and eliminate network issues. **Team DMT** provides a complete IT administration service, a variety of business IT consultations and IT management services with a greater range of services than most computer network service companies. We focus on managing a client's entire IT infrastructure, allowing the client to focus on their core business objectives.

The System and Network Administrator will be responsible for managing the computer and network systems for small to mid-sized businesses including network management for workstations, laptops, servers, routers, modems, switches, client mobile devices and third party application administration. You will monitor and maintain network systems, troubleshoot and make improvements to client's networks as necessary. You will also have an active role in consulting with clients on hardware/ software and network solutions that improve business processes and efficiencies and the research and procurement of IT assets.
