NOW THEREFORE BE IT ORDAINED BY THE COUNCIL OF THE VILLAGE OF GLORIA GLENS, COUNTY OF MEDINA AND STATE OF OHIO, THREE-FOURTHS OF ITS MEMBERS CONCURRING HEREIN AS FOLLOWS :

SITE RESTORATION

GENERAL

In all cases where a contractor or other party is performing excavating or placing obstacles within the limits of a street or roadway in the Village of Gloria Glens, Medina County, Ohio, it shall be the responsibility of the contractor to restore the disturbed area to a condition equal to or better than it was originally.

All mailboxes, signs, yards, driveways, roads, drainage structures, fences, ditches, and sidewalks damaged or removed during construction will be replaced or repaired by the contractor, equal to or better than existed prior to construction, as soon as possible.

After any pipes, conduits, drains or other underground structures are laid or any excavation is made within the limits of the street or roadway, the trenches or openings shall be properly backfilled with suitable material.

OPEN CUT

Approved excavations made within the traveled portion of the street or roadway, in the berm within four feet (4') of the pavement edge, and within four feet (4') or less of the inside edge of the trench, in street intersections or in driveways, shall be backfilled with granular materials.

Where work performed requires removal of the pavement, the surface shall be cut with a masonry saw to a depth of three inches (3") or as required to provide a clean break. The width of the trench shall be a minimum of twelve inches (12") or one (1) pipe diameter plus eight inches (8"), whichever is greater.

The contractor shall maintain one-way traffic during times of construction by using steel plates to cover the trench.

BACKFILL MATERIAL

Excavations that require a granular backfill material may be filled by "free dumping" No. 67 Limestone (see Item 703 Aggregate, State of Ohio, Department of Transportation, Construction and Material Specifications) both under the road surface and in the berm areas.

The No. 67 Limestone shall be brought up to within eighteen inches (18") of finished grade. The remainder of the excavation shall be backfilled with Item 30, Aggregate Base, in layers not to exceed six inches (6"), loose measurement. Each layer shall be tamped or rolled. If layers cannot be tamped or rolled, a No. 57 (K-Crete) should be used, or the area should be backfilled. In addition, where the road surface was removed for construction, the surface shall be replaced with either asphaltic concrete (Item 404) or high-early-strength concrete. The surface thicknesses shall be a minimum of eight inches (8") and shall be finished to the same grade as the existing road surface. Adequate precautions shall be taken to prevent the concrete from freezing. Any concrete that fails within ninety (90) days after project completion, shall be replaced by the contractor, or on his failure to act, by utilization of his maintenance bond. The contractor shall protect the restored area by using steel plates until such time as normal traffic can proceed without causing damage to the roadway surface. Driveways and drainage ditches that have been disturbed shall have a *top* layer of material comparable to that which was removed.

TIME PERIOD FOR COMPLETION OF RESTORATION

- a. All restoration within the right-of-way must be completed within ninety (90) days after completion of the work performed within the right-of-way. If conditions prohibit restoration to be performed within the ninety (90) day time period, an extension of time may be granted at the discretion of the Village.
- b. If restoration is not completed within the approved time period, the required work will be performed by the Village. All costs incurred for labor and materials to perform the restoration will be billed to the contractor for payment.
- c. Failure to pay all amounts charged for restoration performed by the Village will result in the amount being deducted from the performance guarantee furnished or forfeiture of the performance guarantee.
