

Duro-Last Benefits

- **A complete roofing system:** a single source manufacturer of all components.
- **White:** reduces heat by reflecting over 85% of the sun's ultra violet light.
- **Custom-made roof sections:** eliminates project waste.
- **Efficient:** large roof panels, up to 2500 sq. ft., mean excellent coverage for tear-off jobs should "pop up" thunderstorms occur.
- **Prefabricated:** reinforced flashings reduce roof top waterproofing by 85%.
- **Without seam problems:** Duro-Last is heat fused at all seam junctions. Heat welds are the strongest roof seams today – stronger than the actual sheet.
- **Fast to install:** the application time of the Duro-Last System is incidental to the roof removal and deck preparation. It is fastened directly to the deck, not glued secondarily to insulation board.
- **Weather friendly:** excessive heat or cold, wind and minor dampness (dew or mist) do not affect the quality of your roof during application.
- **Serviceable:** if future modifications are made to your roof top equipment, Duro-Last can supply new components for resealing, using the same heat welding process.
- **Warranted:** 15-year warranty including labor and material or a 20-year warranty, including 10 years complete replacement and ten years of pro-rated material coverage.
- **Covering your contents:** Duro-Last does not exclude consequential damages from warranty coverage.
