A simple solution to a complex problem

VISUAL HEALTHNET CLINICAL DOCUMENT EXCHANGE LEVERAGES YOUR CURRENT INVESTMENT TO FULFILL THE VISION OF HEALTH INFORMATION EXCHANGE.

Public health has never been short on paperwork, even in the digital age. Even as millions of dollars are poured into health information exchanges and other initiatives to enable interoperability between EHRs, public health departments continue to be a nexus for the exchange of paper-based medical records, especially for disease control and the monitoring and care for at-risk populations. To solve this, Mitchell & McCormick and Inofile™ have partnered to bring you a simple solution...Kno2™

Kno2™ is an easy-to-use, cost-effective, cloud-based software application that creates a groundbreaking "on-off-ramp" between sources of "unstructured" clinical information and various health information exchange networks, as well as Electronic Health Record Systems (EHRs).

Kno2 is designed especially for healthcare providers challenged by lack of investment dollars for technology purchase, those without technical or IT resources or those burdened with technology that's out-of-date. Kno2 makes it easy for all healthcare organizations to integrate effectively into today's evolving, increasingly complex healthcare ecosystem.

For healthcare providers using paper-based records, Kno2 enables you to:

- Scan and immediately convert paper to healthcare-compatible formats, and a Direct Message—using common scanning devices
- Receive Direct Messages with attachments and convert immediately to a print-ready format or PDF for filing back to your patient chart

For healthcare providers using an EHR that is not currently compatible with Direct Messages:

- Download and send documents created in your EHR, including PDFs, CCDs, and other structured documents such as a minimum data set (MDS)
- Use common scanning devices to capture paper-based information and easily attach it to a Direct Message suitable for transfer to other healthcare providers
- Receive Direct Messages with attachments and upload to your EHR with ease (including PDF, XDS-SD)

Visual HealthNet Clinical Document Exchange

- Saves time & money
- Simplifies exchanging records with other providers
- Meets all applicable federal security requirements
- Leverages the vast and reliable Surescripts network

HOW KNO2 WORKS

Kno2 improves the exchange of patient information with a simple, affordable solution that plugs into the organization's normal ways of working. Kno2 also easily adapts to any clinical workflow because we've designed Kno2 around the way people work today. Equally important, we've designed Kno2 for the very near reality of Direct Messages being the universal healthcare standard for information exchange.

Health System

+ Enables direct, secure and meaningful exchange of patient information.

+ Creates a common link for all members of the care continuum to securely exchange patient information.

+ Allows providers to transform unstructured content into interoperable patient information.

+ Helps providers complete the patient record, improving quality of care and ultimately providing better patient outcomes in the process.

+ Transforms commonplace hardware like MFP's and scanners into Direct Compliant devices.

Kno2™

Provider

KNO2 BENEFITS

- Improves timeliness, accuracy, security and "structure" of vital patient information used within any healthcare community
- Ensures compatibility and compliance with the latest healthcare technology standards and practices including Meaningful Use Stage 2
- Supports Direct Messages by intelligently automating the receipt and delivery of messages with attachments across a secure point-to-point Direct-compliant network
- Enables care providers to securely send and receive patient information via standards-based formats and methods using many of the devices they use every day
- Enables faster, more accurate transfers of care, referrals and other record-sharing activities with outside providers and partners by sending and receiving Direct Messages
