

THE REAL WHITE HOUSE

AND PRESIDENCY OF THE USA THE FEDERAL RESERVE SYSTEM

The U.S. Federal Reserve System is not of the U.S., not under the Federal government and there are no reserves. It is a conglomerate of foreign owned central banks that rule the United States. They set interest rates, establishes the monetary policy for the economy and prints the money by fiat and usury. It was created on December 23, 1913 as they orchestrated the bank panics and they still do. Their monetary policy decisions do not have to be approved by the President or anyone else in the executive or legislative branches of government. They do not have any Congressional oversight and are not accountable to the citizens of the USA. They boast that their law is the highest law of the Land trumping even the U.S. Constitution.
