Scripps Green Hospital Selects Electronic Control Systems for New State-of-the-Art Fire Alarm System Installation

Hospital chooses proactive approach to ensure the safety of all patients and staff

Poway, CA – March 5, 2015 – Electronic Control Systems, a division of Albireo Energy, today announced the award of the project to completely install a new fire alarm system for Scripps Green Hospital in La Jolla, California. This bid was awarded based on proposed schedule and proven expertise on completing a fire alarm system replacement project with very similar scope for Scripps Memorial Hospital in La Jolla, which ECS recently completed. Like this project, that installation took place while the hospital was operational, working closely with hospital staff on a room by room basis to avoid disruptions in day-to-day operations and ensure patient satisfaction and safety.

“Scripps Health is such an important part of the San Diego community and we are honored to have been selected to work with them on this forward-thinking project,” stated Zbigniew Cabaj, Division President of Electronic Control Systems.” “Hospitals create unique challenges and opportunities to integrate life safety, energy management and low voltage systems. With our experience in smart building technologies, ECS is positioned to provide a seamless installation that will integrate HVAC and fire systems to disable ventilation during a fire emergency.”

Every fire alarm system has an average lifecycle, and Scripps Green recognized that their existing system was nearing maturity. To ensure the safety of patients and staff, Scripps Green took a proactive approach to replace the system before critical issues arose. The newly designed system will both alert and evacuate the hospital in the event of a fire, and prevent false alarms that disrupt hospital productivity ultimately improving patient care, reducing costs and improving the bottom line.

About Electronic Control Systems (ECS)

ECS, a division of Albireo Energy, a national smart building automation and energy service provider, has been delivering building automation solutions throughout Southern California since 1996. Today it has approximately 200 professionals dedicated to installing building automation, energy efficiency measures, fire detection and security systems in thousands of buildings throughout California and adjacent markets. ECS has successfully completed projects in varying vertical markets including pharmaceutical labs, manufacturing facilities, commercial office buildings, casinos, hotels, military bases and government facilities, universities and schools.
