MOON NEWS

On Saturday July 20th at 19:59 (EDT) – the Moon will be at apogee, which is the furthest point along its orbit to the Earth. It may appear slightly smaller than at other times. The time period between the Moon's perigee (closest approach) and apogee along its elliptical orbit is 27.555 days—the *anomalistic* month.

The variation in the Moon's appearance (an actual change in angular diameter) during its cycle between perigee and apogee should not be confused with the **Moon Illusion**.

THE MOON ILLUSION

This is an optical illusion that makes the Moon appear much larger than it really is when it is close to the horizon. While this phenomenon has been recorded by various cultures since ancient times, the explanation of this illusion is still a topic of debate with various theories being proposed starting with Ptolemy.

Want to learn more about the moon illusion? KITCHEN HELP NEEDED

The Keuka Yacht Club is looking for someone to help in the kitchen the rest of the summer part time. Not much experience is required as we can teach this person our process. That being said we need someone who is reliable and has a positive attitude. If you know of anyone looking for a part time job please share this posting with them and have them reach out to us.

Thank you,
Keuka Yacht Club Board of Directors
