Since 2004, A/V Solution's LLC, has been contracted to provide the sound reinforcement for the Gettysburg Reenactment. **The 150th Gettysburg Reenactment** was not only grandiose but was significant as well. There was an estimated 200,000 people coming into town for the anniversary and this event was a top draw with an expected tens of thousands of spectators. In order to cover the grounds, A/V Solutions, LLC, used varied equipment and applications. Speakers were installed above the bleacher-seating area in order to allow the entire grounds the abilities to hear general and safety announcements. Horns were placed throughout the battlefield grounds to aid in bringing the event to life by adding volume and clarity to the battle dialogue. In addition, smaller sound systems were placed in tents for presenters to use when presenting to the audience.

Featuring The Following Equipment:

- Rane Processors
- BSS
- Microphones
- QSC Amplifiers
