

Builders Enviro Services, Inc.

Statement of Sustainability

Builders Enviro Services, Inc. works daily to become a more sustainable company with the ultimate goal of being recognized as a company that cares about the environment, and our part in protecting and maintaining our air, water and soil using cleaner business solutions and sustainable products. We aim to do this while retaining good customer service and a desire to pass on responsible stewardship to vendors and subcontractors whenever possible.

In order to achieve this, BES will do the following:

Communicate:

- Communicate with customers, suppliers and vendors to establish a list of products and services that serve the goal of sustainability.
- Train employees to recognize more efficient methods for reducing our carbon footprint and to look for products that serve the ultimate policy goal.
- Continuous review of current purchasing policies, work procedures, transportation policies and solid waste disposal policies by all levels of the corporate structure.

Reduce:

- Continue to provide opportunities for employees to car pool to projects to reduce fuel consumption.
- Review recycling efforts to ensure that all materials not subject to disposal regulations are recycled and or re-used.
- Reduce the number of trips required for the disposal of regulated materials by ensuring that we fill bins to capacity and not beyond so that no trip is wasted.
- Use Green or Biodegradable materials in everyday operations to support long term sustainability.

Support:

- Communicate our sustainability goals to our customers, vendors and subcontractors.
- Provide suppliers, vendors and subcontractors the opportunity to participate in reaching our goals and helping them establish goals for their companies.
- Participating in outreach activities, seminars and continuing education on sustainability and the reduction of carbon footprint.

By staying aware of our purchasing choices, evaluating our processes, reducing road traffic and working with our suppliers, vendors and subcontractors, BES is striving to provide a more sustainable service to our customers and the planet. BES realizes that it takes a concerted effort by all companies to make a difference and that every small measure can add up to a more sustainable future.
