DAYLIGHT CONTROL SOLUTIONS

exclusively from RollEase®

the difference between

Sometimes the difference is obvious. Sometimes it can be found in the intervening space between the lines. Between light and dark, warmth and cold. Between sunlight and shade, the open and the closed. Between indoors and outdoors, the secure and the insecure. Almedahls makes the difference.

Competence in design combined with innovation in manufacturing, Almedahls offers a large range of Euro-styled daylight control solutions. Developed in Scandinavia, this collection features fabrics for roller shades, pleated shades and vertical blinds. Applications include everything from high-end bedrooms to public spaces where creativity may be unleashed.

RollEase® is proud to be the exclusive distributor of the Almedahls product line for North America and for bringing such innovative and distinctive fabric from Europe to our customers.

innovative

When textile design is at its best it makes a difference. This has been the goal since 1846 with the Almedahls product line. These unique and user-friendly designs will instantly transform a room from plain to fantastic. New products and collections are constantly being developed today to create the classics of tomorrow.

timeless

Offering updated classics with new vibrant colors, Almedahls offers a rich living narrative tradition, embracing decades. Inspired by ceramic spice jars, and originally printed on tea towels, patterns from the 1950s have been reinvented. Bringing those retro patterns back to life in a new way, Almedahls designers have an urge to experiment and develop, infusing fabrics with exciting combinations of pattern and color.

environmental

The Almedahls collection is beautiful as well as environmentally friendly. Almedahls fabrics aim for environmental responsibility by controlling raw materials and chemical components during the production process. Fabrics are produced without chemicals using APEO or azo-dyestuffs. Hydrogen peroxide, instead of chlorine, is used in the bleaching process. As minimizing energy consumption and recycling water are ways of protecting our planet, Almedahls is committed to giving priority to suppliers that live up to demands for environmental consciousness.

roller shade fabrics

The Almedahls Roller Shade Collection offers a wide range of roller shade fabrics to control sunlight and accentuate interior design. The Roller Shade Collection offers fabric styles that range from transparent, translucent, dim-out, black-out, textures, metallics, burn-outs and prints in varying compositions. There are hundreds of designs and variations to choose from in the following styles:

uni

Almedahls offers a diverse selection of solid colored fabrics that are referred to as "Uni", in a vast array of colors in varying degrees of opacity. This wide offering also includes colors to match any interior.

texture

A large selection of textured fabrics are perhaps the cornerstone of the Almedahls fabric collection. Textured fabrics can create beautiful and interesting dimensions on interior window coverings. This unique collection offers textures ranging from sheers, woven linens, puff prints and metallics.

prints & patterns

Almedahls also offers an extensive collection of unique, interesting, and classic prints and patterns. Pulling influences from different eras, regions, and genres – the print collection offers designs to suit any interior style.

fire retardant

The fire retardant collection is produced with a concern for the environment and without bromine or halogenated substances. This collection includes textures, plains, prints, and patterns, suitable for both roller blinds and panels. With a perfect combination of form, function, and aesthetics, these fabrics are ideal for any commercial application.

eco

The ECO collection has fabric from organic cotton grown in the United States, two fabrics made from 100% recycled polyester and another from PLA - made of naturally biodegradable corn, one of the first greenhouse-gas neutral polymers in the world.

panels

Many of the roller shade fabrics can be used to create panel track fabrics. In addition to being a creative window covering, panels can be a versatile way to separate rooms or add privacy screening.

pleated

The Almedahls pleated collection is characterized by the experimental, the innovative and, of course, quality. New features include burn-out, false uni, puff prints, and textured fabrics with a 3D feel. The fabrics are 100% polyester or a 73/27% cotton/poly blend. Polyurethane is used in the coating to achieve good pleat stability.

verticals

Metallic, black-outs and burn-outs focus on the high-end look for vertical blinds. Some fabrics are flame retardant, while others are reversible, with different colors on either side. Metallic fabrics range from pearly white to platinum, gold and silver - some with a unique dotted or arrowhead dye-cut pattern.

Almedahls Uni, Textured and Printed vertical fabrics are available in three widths, including an extra wide 9.84" (250mm) size.
