CALIBRATION

Valid To: November 30, 2021

Certificate Number: 1440.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations^{1, 6}:

I. Dimensional

| Parameter/Equipment | Range | CMC ^{2, 4} (±) | Comments |
|--|---------------------------|--|-------------------------------------|
| Length Standards | Up to 24 in | (11 + 12 <i>L</i>) μin | ULM |
| Gage Blocks | Up to 4 in Up to 20 in | (4 + 3 <i>L</i>) μin (54 + 13 <i>L</i>) μin | Direct comparison ULM |
| Micrometers – Outside and Depth ³ | Up to 30 in | (0.6R + 31L) µin | Length standards and/or gage blocks |
| Calipers ³ | Up to 40 in | (0.6R + 25L) µin | Length standards and/or gage blocks |
| Height Gages ³ | Up to 40 in | (60 + 17 <i>L</i>) μin | Length standards and/or gage blocks |
| Dial Indicators ³ | Up to 1 in Up to 6 in | (0.6R + 30L) µin (0.6R + 13L) µin | Indicator calibrator Gage blocks |
| Test Indicators ³ | Up to 0.1 in | $(0.6R + 30L) \mu in$ | Height master |

¹ This laboratory offers commercial dimensional testing/calibration service.

- ² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of k = 2. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.
- ³ Field calibration service is available for this calibration and this laboratory meets A2LA *R104 General Requirements: Accreditation of Field Testing and Field Calibration Laboratories* for these calibrations. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.
- ⁴ In the statement of CMC, L is the numerical value of the nominal length of the device measured in inches, R is the resolution of the unit under test, and D is the numerical value of the nominal diameter of the device measured in inches.
- ⁵ This laboratory meets R205 *Specific Requirements: Calibration Laboratory Accreditation Program* for the types of dimensional tests listed above and is considered equivalent to that of a calibration.

⁷ The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.
