

The Role of Neural Networks in Signal and Image Processing.....	1
Why Use Neural Networks?.....	1
Choosing a Neural Network Model.....	2
Supervised versus Unsupervised Training.....	3
Real-Domain versus Complex-Domain Networks.....	5
Sizing the Network.....	7
Integrating Neural Networks with Traditional Algorithms.....	9
What Problems Can Be Solved?.....	10
Neurons in the Complex Domain.....	11
Review of Complex Numbers.....	12
Network Architecture in the Complex Domain.....	15
Classification Networks.....	18
The Activation Function.....	18
Output Activation Limits.....	23
Derivatives of the Activation Function.....	24
The Squashing Function.....	27
Inverse of the Activation Function.....	29
Computing the Gradient.....	29
Alternative Error Functions.....	38
Mean Squared Error.....	40
Mean Absolute Error.....	41
Kalman-Kwasny Error.....	42
Cross Entropy.....	43
Maximum Squared Error.....	44
High Powers of the Error.....	45
Mean Log Error.....	46
Log Mean Error.....	48
Summary.....	49
Regression in the Complex Domain.....	56
Review of Real-Domain Regression.....	56
Regression in Real-Domain Neural Networks.....	57
Extension to the Complex Domain.....	59

Data Preparation for Neural Networks.	61
Deterministic Components.. . . .	61
Removing Linear Trends.	64
Removing Seasonal Components and Slow Variation.	67
Removing Other Deterministic Components.. . . .	69
Differencing.	69
Scaling.	70
Weight Normalization.	70
Balancing Relative Importance.	70
Centering.	71
Output Activation Limits.. . . .	71
Special Input Limitations.. . . .	72
Transformations.. . . .	72
Code for Scaling.	73
Frequency-Domain Techniques.	81
Review of the Fourier Transform.. . . .	81
The Fast Fourier Transform.	83
Transforming Real Data.. . . .	86
Aliasing and the Nyquist Limit.	88
The Power Spectrum.	92
Data Windows.	93
Signal Detection in the Frequency Domain.	96
Detection With Known Phase.	97
Normalization For Unknown Phase.. . . .	99
Example of Signal Detection.	102
Complex Data in the Time Domain.	106
Sources of Complex Data.	106
Time-Domain or Frequency-Domain?.. . . .	109
Do We Apply a Data Window?.. . . .	109
How Many Fourier Coefficients Are Needed?.	110
Magnitude and Offset Normalizations.. . . .	116
Phase Normalizations.. . . .	119
Example of a Phase-Sensitive Problem.	133

Time/Frequency Localization.....	141
An Intuitive Layout For The Mapping.....	141
The Short-Time Fourier Transform.....	145
Frames.....	150
When Do We Have a Frame?.....	152
Summary.....	154
The Gabor Transform.....	155
Resolution Rectangles.....	156
The Heisenberg Uncertainty Principle.....	158
Resolution of the Gabor Transform.....	159
Practical Limits On The Resolution Tradeoff.....	160
Code For The Gabor Transform.....	167
Fixed Versus Variable Resolution.....	173
Wavelets.....	180
Discrete Wavelet Parameters.....	182
Wavelet Frames.....	183
Wavelet Voices.....	184
The Mexican Hat Wavelet.....	185
The Morlet Wavelet.....	188
Code For The Morlet Wavelet.....	197
Fast Filtering in the Frequency Domain.....	207
Implementing the Filter.....	216
Code For a Fast Filter.....	217
A Better Implementation.....	219
Fast Filter Examples.....	222
Time/Frequency Applications.....	227
Speech Understanding and the Gabor Transform.....	227
Doppler-Shift Radar and the Gabor Transform.....	236
A Naive Approach.....	237
A Better Approach.....	238
Phase-Defined Events and Wavelets.....	246
A Better Approach.....	250

Image Processing in the Frequency Domain.	253
The Fourier Transform in Two Dimensions.	253
Data Windows in Two Dimension.. . . .	258
Radial Power.	263
Computing the Transform.	266
The Gabor Transform in Two Dimensions.	270
Code for the Two-Dimensional Gabor Transform.. . . .	273
Morlet Wavelets in Two Dimensions.	279
The Mother Wavelet.	281
Scales and Voices.	281
Code For the 2-D Morlet Wavelet.	282
Application Notes.	295
Comparing the Methods.. . . .	296
Fast Image Filtering.	298
Implementing the Filter.	300
Decimation.. . . .	303
Code For The Transform.	305
Zero Padding.	315
An Image-Processing Methodology.. . . .	316
 Moment-Based Image Features.	 319
The Utility of Shape Moments.. . . .	319
Binary Shape Moments.	320
Scale Invariance.. . . .	322
Relation To Mathematical Statistics.	324
Rotation Invariance and Standard Moments.	325
Other Normalizations.. . . .	332
Raw Moment Variables.	334
Measuring Orientation.	337
Moment Invariants and Their Relatives.. . . .	339
Examples of Shape Variables.	344
Tone and Range Moments.	349
What Does the Weight Function Mean?.	350
Binary or Weighted Normalization?.	351
Scaling the Weight Function.	352
Setting the Z-Axis Origin.. . . .	354
Summary of Scale, Offset, and Normalization.	356

Tone/Texture Descriptors.	359
To Window, Or Not To Window.....	360
Foundation Code.	361
Basic Tone and Texture.....	365
Neighbor Contrasts.	369
Variables Based On Sorted Tones.....	375
Other Variables.	377
A Final Note.....	378
Using the MLFN Program.....	381
Output Mode.	382
Network Structure.	383
Output Activation Function.....	384
Building the Training Set.....	385
Learning Methods.	386
Simulated Annealing.	386
Hybrid: Annealing Plus Conjugate Gradients.	387
Regression-Initialized Conjugate Gradients.	390
Starting and Stopping Learning.....	392
Error Functions.	392
Confusion Matrices.	394
Testing in AUTOASSOCIATION and MAPPING Modes.....	395
Saving Weights and Execution Results.....	396
Alphabetical Glossary of Commands.	397
Verification of Program Operation.	401
