

PoolMoss® Pro and SpaMoss® Pro

Sphagnum Moss for Commercial Installations

Sphagnum Moss

Replicating nature's own methods, Creative Water Solutions uses Sphagnum moss to clarify and condition water, in a powerful solution for commercial pools, spas, and fountains

The use of our products:

- Reduces disinfection by-products and that "pool" smell
- Reduces organic contamination on all pool and filter surfaces
- Reduces heat, energy, water, and utility waste
- Reduces scaling and corrosion

So you can:

- Use fewer chemicals, less often
- Balances pool and spa water chemistry using less chemicals less often
- Stabilizes pH and alkalinity using less chemicals
- Pool and spa care and maintenance are easier and less time consuming

In our systems, Sphagnum moss work much like a tea bag. The moss is placed inside a contact chamber, which allows it to interact and treat the pool/spa water. Once treated, the moss-conditioned water helps water treatment chemicals work more efficiently.

- With water and air that feels and smells as great as it looks, swimmers truly enjoy swimming again
- Chemicals work more efficiently, which means, which less are being used
- Saves water by allowing filters to work more efficiently that results in heating, energy, chemical, and water savings
- Scale and corrosion are dramatically reduced
- It is sustainable, totally natural water treatment that nature refined over millenia
