

Turn that Trashed Money into Pure Profit

How much money are you throwing away at the end of a cement forming job? At the end of five or more jobs? What if you add up all of the money you spend on chucked wood at the end of the year? If we could show you how to turn that trashed money into pure profit would you be interested? Come to Booth #6472 to PlastiForm Concrete Forming Systems and we will show you how!

We will show you beautiful HDPE flexible, resilient, easy to use boards used for curves, radius and straight work. We use them for foundations, driveways, curbs and gutters, pathways, short walls, patios, planters, benches, counter tops and more! They are perfect for decorative concrete. Make your customers happy with one of a kind designs instead of boring boxy designs.

They are stackable and easy to set up. They use Camlocks and connectors which eliminate the use of nails. They can be stripped off as soon as the concrete

won't slump saving you days of wait time! They can be used over and over and over again! Some have been used steadily since 1984 when they first came out! They flatten back out after use, ready for whatever other curve or straight work you have in mind! They use a little form oil which makes them virtually non stick. The result is a glass like finish. PlastiForm is impervious to chemicals so you can go ahead and use colored cement or stains without fear of hurting the boards.

They don't have the problems of wood or metal forms because they won't rust or be affected by water. They don't peel, splinter, warp or split either. If they buckle, just cut and reuse. This also means you won't be spending hours before every job trying to find straight knotless boards and driving to the dump at the end of the job to throw them out.

They are light, about 1/4 the weight of wood so are easier to carry saving you

trucking time and crew labor. Less weight and nailing means less Worker Comp claims and less time lost waiting for you or your crews to heal. They are so easy to use, they can save you 50-75 percent time in setting up and stripping and can be stripped as soon as the cement won't slump!

We belong to USGBC so are LEED Certifiable and because are reusable and recyclable, are considered a green prod-

uct. Our boards usually are about four times the price of wood but are used for years so pay for themselves and then Make you money, lots of it! Our Premium Boards are USA made and are guaranteed for life.

Come introduce yourself to our friendly staff and learn how to save time, money, labor and trees! When you do that, you then turn those savings into Profit!

We will be glad to show you how. PlastiForm Concrete Forming Systems Booth #6472.
