

Drought Monitoring in SWFL

Valued Clients--

Southwest Florida has experienced major drought problems throughout the last several months. Due to current water restrictions in both Lee and Collier County, it poses a challenge to provide the more sensitive plants and turf with enough water to prevent the visible sign of stress. In the late afternoon, dry spots should be anticipated in full sun areas, with those same areas bouncing back with the next watering cycle. As the heat and humidity increase leading up to our seasonal summer rains we will continue to make necessary adjustments as they arise.

Below, you will find a link to the National Drought Mitigation Center and their website which will also help you to identify the drought specific to your area.

This link will take you directly to the National Drought Mitigation Center and from there you can type in your zip code and see directly how your area is being impacted by the drought conditions.

Thank you for your continued partnership and should you have any questions, please do not hesitate to contact us at 239-643-4471.
