

**MULTI SKILLED ENGINEER** required for a range of engineering tasks, to include but not limited to – general assembly work of large components, repair work, on-site service & installations, including pipework.

Applicants should be skilled & experienced; enthusiastic & self-motivated. Able to work by themselves & make decisions & also able to work as part of a team. Be well presented & able to converse with customers as necessary.

This post would suit someone from a maintenance background or with an engineering background and some of the skills listed or an engineering qualification. Knowledge of hydraulics would be an advantage. Training can be provided for skills that may be lacking.
