

Thank You

Thank you for visiting us at Mobile World Congress last week, and for your interest in our IMS-enabled APEX Video Conferencing System for 3G/4G (LTE) networks.

As the only Solutions Provider at MWC with implementation experience, we have addressed the critically important “any device to any device” challenge, and also integrated a multi-media Composition Engine for a richer shared experience on triple, and quad play networks.

Our APEX Video Conferencing System offers more than just video conferencing, as it is a complete solution for Network Operators and Value Added Service Providers around the world that includes:

- Service Delivery Platform
- Service Creation Environment
- OAM&P Console
- Conference Management Portals
- Application Server
- Multi-Media Composition Engine
- Dynamic Video Generator
- Video Media Server

Due to the overwhelming interest at the show, it may take us some time to get back to everyone individually. Therefore, please click the link below to schedule a follow-up call, and visit our Video Conferencing System and Composition Engine web pages.
