

# ActivALOE™

Aloe Vera Raw Material

Natural Plant Growth Promotant

The Aloe Vera plant is recognised as having a very strong immune system, and is never affected by any pests nor insects. Now growers can utilise the many benefits of Aloe Vera as a foliar and soil spray to offer a natural immune booster, and added protection for their crops.

Benefits of concentrated ActivALOE™:

- Cold pressed & carefully processed to retain all of the active properties of the whole leaf Aloe Vera plant for full benefits.
- A botanical activator and plant growth promoter which can improve overall plant health including its immune defence, plus suppress pathogenic bacteria.
- Improves microbe multiplication in the soil and on the leaf. This can be further boosted when mixed with the Activfert's Micro-Gro.
- Contains natural ingredients that promote cell replication (plant growth) with polysaccharides for high absorption of nutrients, Phytochemicals of Aloin, Salicylic Acid and Saponins. These aid with foliar feeding, and balancing the plants health, and are also an excellent fungi food for soil.
- Protective face masks do not need to be used with spraying this product
- Universally beneficial for all types of plants and growing techniques.
