**CURRENT PROJECTS AT
TIYAMIKE MULUNGU
CENTER**

A hole for septic tank water disposal. We are using evaporation as well as percolation into the clay soil.. Two 10ft diameter towers double as distribution points and our back-up in case of system overload needing pump out...

Building Pictures on left are showing before and those beside on right are .. after.. High ceilings are for convection and much needed to help with heat..

Some happy kids and now time to make furniture ...

Now done (below) foundations for two additional classrooms, on hold until Childrens quarters renovations completed. After these hopefully two more classrooms.

The building on the left now has 2 suites, one with two bedrooms and one with three bedrooms. Each suite has a sitting/eating room and a toilet/bathing room. The building on the right has 3 suites ... two with two bedrooms and one with a large dorm bedroom, all 3 have sitting/eating rooms and toilet/bathing. After finishing up these renovations (about two weeks), we plan (hope) to renovate the boys quarters at the other site.
