Oversize Common Carrier Delivery

All orders with any quantity of shades or blinds or any continuous valance 90" or more in width are considered oversize. Therefore, a net shipping charge per oversized unit will be assessed.

Oversized orders that require expedited shipping will be quoted and charged accordingly.

Please see General Information for additional freight and shipping charge information.

IMPORTANT NOTE ABOUT NATURAL WOVEN MATERIALS

Our custom crafted Woven Wood shades are uniquely constructed from natural bamboo, reeds, jutes, rattan, grasses and woods. Many materials, such as natural grasses, are hand tied and braided with expert care.

Over time, some patterns may turn slightly darker or lighter in color, depending on the material. Variations in stain, pattern irregularities and knots are unique characteristics that contribute to the natural beauty of the shade.

It is common for woven shades to minimally stretch in length over time due to the natural fibers of the material and characteristics of some weaves. The average stretching amount is approximately ½" for every 3 feet of shade length plus or minus ¼".

Due to the woven construction of our shades, yarns may have shifted during shipping. This shifting may cause a slight shortening of height or uneven edges.

Please read below for quick and easy remedies.

Height: If after installation you find your shade is slightly shorter than the ordered height, simply grasp the bottom of the shade and gently pull to stretch the product to full height.

Uneven Edges: Lightly tap edge of shade with a flat surface (ruler, etc.) until even.

SHADE CONFIGURATION DIAGRAM

Shades and Individual Valances Are Built on 1 of 3 Headrail Depths:

1-1/2" Headrail Depth: Standard Rectangular, Waterfall Style, Top-Down/Bottom-Up & Turned Headrail
 2-1/2" Headrail Depth: Automation, Continuous Loop Control, 2 or 3 on 1 Headrail & Individual Valances
 3/4" Headrail Depth: For narrow mounts

OUTSIDE MOUNT (& CEILING MOUNT) VALANCE WIDTH ADDITIONS FOR:
Standard, Top-Down/Bottom-Up & Somfy Automation Shades (see next pages for Continuous Loop Control Shades)
 A small width addition is made to the valance to create a "cornice style" box for approved appearance & shade operation/stacking.
 Valance Width ADDITION = +1/2 "PER SIDE = +1" Total

RETURN NOTES:

Standard outside mount return depths are 1-3/4" for the small headrail and 2-3/4" for the large headrail.

Outside mount returns are attached to the valance using the **VRS SYSTEM** on woven wood only.

The VRS System is NOT featured on Decorative Wovens (Grass Weaves & Select Weaves) due to the sheerness and fabric weight. Returns will use the classic velcro for attachment.

The outside mount valance width addition covers the front facing edge of the return and creates a clean corner.

If optional returns are ordered on an IB Mount, they will use the classic velcro "dog ear" attachment method (not VRS).

Returns not available on turned headrail or 3/4" headrail shades.

VALANCE RETURN STABILIZER (VRS) SYSTEM

Outside mount shade valances come with the innovative Valance Return Stabilizers (VRS) System. The VRS System includes clear corner pieces and are attached to the valance and returns, keeping them stable and in perfect alignment. The valance also covers the front edge of the returns. A tiny spring mechanism in each VRS keeps the valance hanging straight down off the headrail, while also allowing you to raise the valance for installing the shade and for periodic dusting/cleaning underneath.

Not Available on Decorative Wovens (Grass Weaves and Select Weaves). Returns with velcro are available under Decorative Wovens.

LIMITED LENGTH ADJUSTER

Woven Wood shade configurations that have a bottom dowel will include a Limited Length Adjuster. Shades that have a edge-binding or tape-binding on the bottom will NOT include the adjuster. The Limited Length Adjuster allows up to a 1" shade height reduction (depending upon the dowel size and woven material). It works by simply SLIDING UP the Adjuster on each side of the shade which in turn rolls the dowel up. This is an innovative solution to adjust for some woven shade stretching, which may occur to some extent over time with all woven wood materials.

Not Available on Decorative Wovens

CONTINUOUS LOOP CONTROL SHADE DIAGRAM

INSIDE MOUNT WIDTH DEDUCTIONS FOR: Continuous Loop Control Shades

Minor adjustments are made to the standard IB width deductions for Continuous Loop Control shades to improve the loop control operation. These adjustments allow the loop control and safety tensioner to be shifted toward the outside edge of the shade.

Headrail & Valance Width DEDUCTION =	-1/4" (STANDARD) IB WIDTH DEDUCTION ON BOTH SIDES =	-1/2" Total
Shade Panel Width DEDUCTION =	-1/4" (ADJUSTED) IB WIDTH DEDUCTION ON BOTH SIDES =	-1/2" Total

standard - 1/4" IB width deduction to headrail, fabric and valance ON BOTH SIDES

OUTSIDE MOUNT (& CEILING MOUNT) WIDTH ADDITIONS FOR: Continuous Loop Control Shades

Minor adjustments are made to the standard OB width additions for loop control shades to improve the loop control operation. These adjustments allow the loop control, chain and safety tensioner to be shifted toward the outside edge of the shade.

Headrail Width ADDITION =	+1/4" ON BOTH SIDES = +1/2" Total
Valance Width ADDITION =	+3/4" ON BOTH SIDES = +1-1/2" Total

adjusted +1/4" OB width addition to headrail ON BOTH SIDES

adjusted +3/4" OB width addition to valance ON BOTH SIDES

NOTE: The adjusted OB width additions to the headrail (+1/4" on each side) allow clearance for the loop control and safety tensioner.

Valance and returns attach with the VRS system (Woven Woods only) which then adds the (standard) +1/2" beyond the headrail width on each side.

CONTINUOUS LOOP CONTROL SYSTEM - MOUNTING AND WIDTH ADJUSTMENTS NOTES

Continuous Loop Control Systems offer manually operated clutch mechanisms for raising and lowering shades. By simply putting on one side of the loop, shades can be quickly and precisely positioned. Left or Right side control positions may be specified.

Continuous Loop Control shades are installed with special L-shaped (small roller shade cassette headrail style) mounting brackets, which snap into a flat, custom fit connector pre-attached to the headrail. This loop control bracket system allows the loop control mechanism to be shifted to the very edge of the headrail so that the loop is shifted toward the edge of the shade, rather than hanging in front of the shade. The width adjustments made on the loop control side allow the cord loop to hang straight down to the required, mounted safety tensioner and clear the edge of the woven material.

NOTE: There is a likelihood where cord will rub against the edge of the shade. Hence, edge binding is highly recommended.

CORDLESS BREEZE SHADE DIAGRAM

Cordless Breeze shades can be built on small 1-1/2" and/or large 2-1/2" depth headrail depending on shade material and size.

INSIDE MOUNT WIDTH DEDUCTIONS FOR: CORDLESS BREEZE

Headrail & Valance Width DEDUCTION =

-1/4" (STANDARD) IB WIDTH DEDUCTION ON BOTH SIDES =

**standard -1/4" IB width

OUTSIDE MOUNT AND CEILING MOUNT WIDTH ADDITIONS FOR: CORDLESS BREEZE

Headrail Width ADDITION = +1/4" ON BOTH SIDES = +1/2" Total

Valance Width ADDITION = +3/4" ON BOTH SIDES = +1-1/2" Total

**adjusted +1/4" OB width

SIDES**

**adjusted +3/4" OB width

Valance and returns attach with
the VRS system (Woven Woods
only) which then adds the
(standard) +1/2" beyond the
headrail width on each side.

LIMITED LENGTH ADJUSTER

Woven Wood Cordless Breeze shade without edge-binding will have a limited length adjuster. Insert a phillips screwdriver into the adjuster. Turn left to shorten and right to lengthen.

This is a solution to allow limited adjustment for some woven shade stretching, which may occur to some extent over time with all woven wood materials.

Note: Privacy Lining is attached to the back of the shade. Small slits are made in the lining at the ring cord-guide attachment locations. When Faux Silk or Twill Edge-Bindings are also ordered, the privacy lining will be sewn under the binding.

When liner is desired, material with open weaves using a darker liner (facing the woven material) is recommended to prevent reflection under artificial light.

- Adding a liner to the back of the shade may make the color hue within the material appear stronger and more vivid.

- Sewing pin holes may be visible. Light may be visible through the pin holes.

- Room Darkening patches will be used in all operating systems to minimize visible pin holes. The patches will be placed on every ring to cover the stitches of the needle.

- Room Darkening patches are not available with reverse liner.

- Room Darkening Patches come in white only.

* Depending on the material and shade size, cordless breeze shade can be built on 1-1/2" and/or 2-1/2" headrail (See **Cordless Specifications: Headrail & Size** section for detail).

FINISHED DIMENSION & MOUNTING NOTES

Note: Ceiling mount shades are OB/OS by default and have the same finished dimensions. IB/IS shades may also be "TOP" mounted using the standard L-style brackets or using the optional Flat brackets.

** The flush mount depth requirements indicated above include space for the woven material attached to the front (valance) and back (shade) sides of the headrail. These are AVERAGE depths as the different woven wood materials have varying degrees of thickness. Verify your individual shade's depth before mounting, then position brackets accordingly for an EXACT flush mount.

* OB/OS Valances and returns are attached using a Valance Return Stabilizer. The OB/OS valance width additions indicated above create a "cornice style" box for improved appearance and operation.
