

\* \* \* \* \*

The lake will be treated with Aquathol Super-K, an herbicide aimed at killing milfoil, an invasive plant. Only certain portions of the lake will be treated because of DEC restrictions on how much can be treated. Please note that we have rescheduled the previously announced Aquathol Super-K treatment from Wednesday, July 16th to Wednesday, July 23rd, weather permitting. If we are not able to treat on July 23rd, we will postpone the treatment until Thursday, July 24th or Friday, July 25th.

Please note the following water use restrictions following the treatment:

SWIMMING : NO SWIMMING FOR 24 HOURS FOLLOWING TREATMENT

IRRIGATION: NO USE OF WATER FOR IRRIGATION FOR 7 DAYS FOLLOWING TREATMENT

LIVESTOCK WATERING: NO USE OF WATER FOR LIVESTOCK WATERING FOR 14 DAYS FOLLOWING TREATMENT

HUMAN CONSUMPTION OR DOMESTIC PURPOSES: NO USE OF WATER FOR HUMAN CONSUMPTION OR DOMESTIC PURPOSES UNTIL AQUATHOL SUPER K LEVELS ARE LESS THAN 50 PPBs

Warning signs notifying you of the treatment and the water restrictions noted above will be posted along the shoreline immediately prior to the treatment..

The weed-harvester will have to remain out of the lake for a week or two following the treatment to allow for the treatment to take effect.
