Is-it possible to find out the exact date of every event of the Bible?

We saw in my work “Ezekiel 4. The master key to unlock the Bible’s chronology” that the right chronology lead to patterns, all kind of numeric patterns. Could there be others patterns, still hidden, that would led us to a new level of time accuracy?

What is the ultimate accuracy in time?

Isn't it the year, the month, and the day that an event occurred.

We already know the year that every event occurred, lets try to find the month and the day.

Jacob starts for Laban 2245

7

Jacob marries Lea & Rachel 2252

Gen 29:20 So Jacob served seven years to get Rachel,

Gen 29:27 then we will give you the younger one also, in return for another seven years of work."

Gen 30:1 When Rachel saw that she was not bearing Jacob any children, she became jealous of her sister.

Gen 30:3 Here is Bilhah, my maidservant. Sleep with her so that she can bear children for me and that through her I too can build a family."

LEAH

1	Reuben b. 2253	Gen 29:32
2	Simeon b. 2254	Gen 29:33
3	Levi b. 2255	Gen 29:34
4	Judah b. 2255	Gen 29:35

Gen 30:9 When Leah saw that she had stopped having children, she took her maidservant Zilpah and gave her to Jacob as a wife.

Zilpah

1	Gad b. 2256	Gen 30:11
2	Asher b. 2257	Gen 30:13

5	Issachar b. 2257	Gen 30:18
6	Zebulon b. 2258	Gen 30:20

RACHEL

Bilhah

1	Dan b. 2255	Gen 30:6
2	Naphtali b. 2256	Gen 30:8

Gen 30:22 Then God remembered Rachel; he listened to her and opened her womb

1	Joseph b. 2258	Gen 30:24
---	-----------------------	-----------

2	Benjamin born 2268 AM	Gen 35:18
---	------------------------------	-----------

20

7

Jacob works for his household 2259

6

Gen 31:41 I worked for you ... six years for your flocks,

Jacob leaves Laban 2265

Gen 31:38 I have been with you for twenty years now.

I am now going to extend the previous pattern with more events related to Abraham. I am also going to introduce a date to each event, it may seem an impossible task but it can be done with a relative easiness. All we need to do is to identify a single event whose date is already known. Once we have identified 'this single event' we will be able to figure out the date of the other events by adding or removing a number of days supplied by our pattern. (*IMPORTANT: if one day the pattern was rejected, all the dates associated with it would be automatically nullify*).

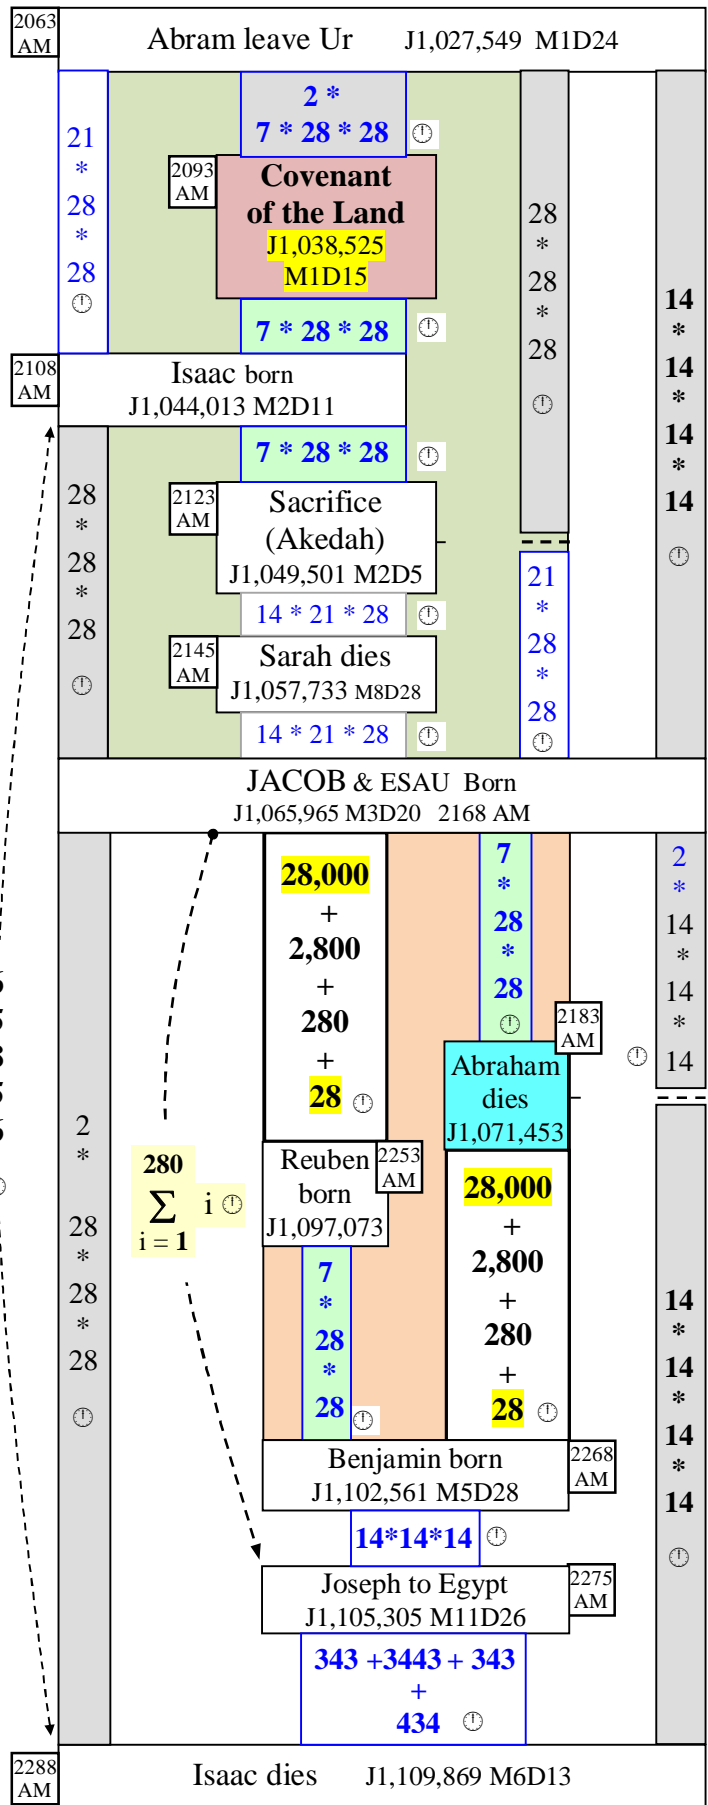

Num 33:3 The Israelites set out from Rameses on the fifteenth day of the first month, the day after the Passover.

Ex 12:41 At the end of the 430 years, to the very day, all the LORD's divisions left Egypt.

We already know that Exodus happened 430 years after the Covenant of the Land. Here Ex 12:41 tells us that it occurred the very same day, therefore we know that the **Covenant of the Land occurred on the 15th day of the first month.**

By using an astronomical software like RedShift we learn that the Julian date associated with the 15th day of the first month of year 2093 AM (May 1, 1870 BC) is Julian 1,038,525. Appendix C will explain how it is possible to associate 2093 AM and 1870 BC)

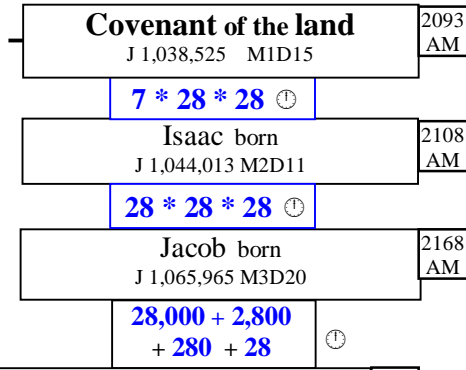

(The 'Julian day is a unique, sequential, integer number tagged to each day of the Gregorian calendar. In the case of May 1, 1870 BC the Julian day is J1,038,525. Working with Julian day greatly simplifies the task of obtaining the number of days between two dates, or, if there is a need, finding a new date by going forward and backward a number of days from a known date.

Every event on this page is separated from the next one by a number of days multiple of 7.

This means that

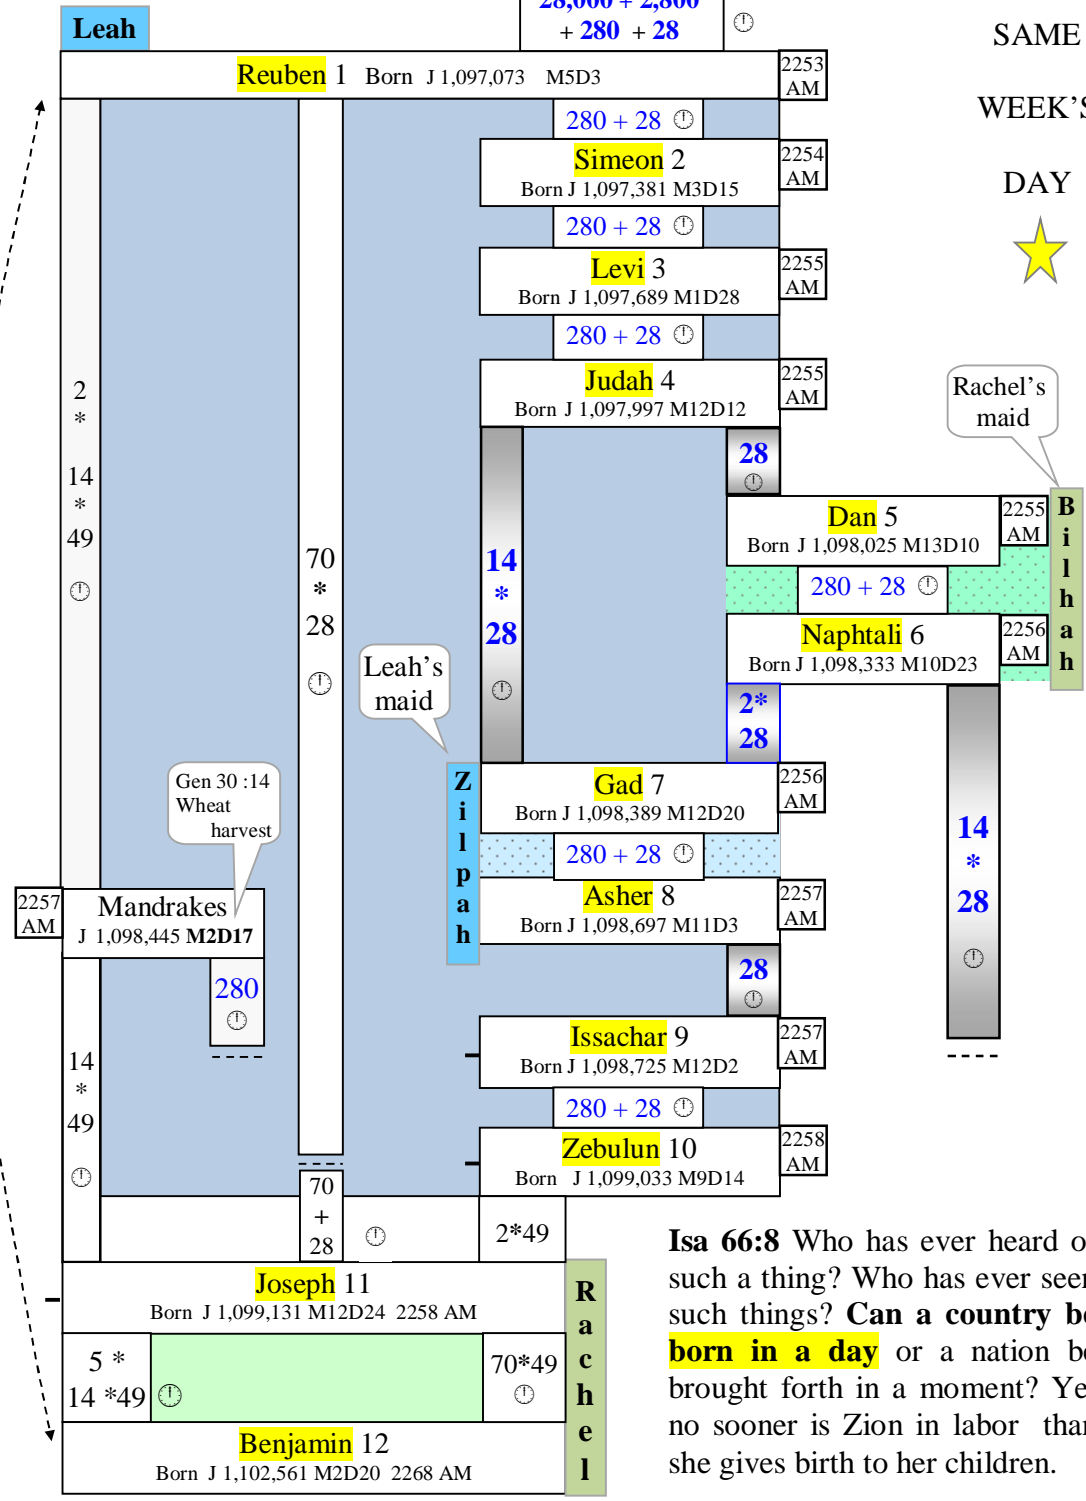

every event happened on the same day of the week.

Isa 66:8 Who has ever heard of such a thing? Who has ever seen such things? Can a country be born in a day or a nation be brought forth in a moment? Yet no sooner is Zion in labor than she gives birth to her children.

Here to the # of days (☉) and the # of years, I introduce a new type of time marker: the number of New moons (C) between two events. Figuring this information could seem complicated but it is not. With an astronomical software like RedShift we can easily find out when a new moon occurred before or after a specific date and count exactly how many happened before a second event. As a quick rule there are 29.5305888 days between two New moons.

Gordon Franz say:
Menashe Har-el makes a solid case for Jebel Sin Bishar being the real Mt. Sinai. 29°40'18"N, 32°57'40"E

3773 & 7337 : These two interesting numbers will keep appearing from now on. Take 3773, it is the product of 49 and 77. But there is much more. Multiply 37 and 73 and you get 2701. (this is the sum of the gematria value of the first 7 words of Gen 1:1. Now, add 2701 to 1072 (its digit reflexion and you will obtain 3773. (info obtained from Vernon Jenkins website.
