

## **12 BASIC STEPS OF BOW TUNING**

1. Pick the proper arrow.
2. Select the proper rest for your style of shooting.
3. Adjust the bow for an even tiller.
4. Adjust the draw length.
5. Time the cam(s) and mark them for future reference.
6. Adjust the nock height.
7. Adjust the center shot for the arrow rest.
8. Set the peep sight for the proper height.
9. Perform a powder test for vane clearance.
10. Paper tune the bow from two different distances (or bare shaft tune if finger shooter).
11. Group tune the arrows by adjusting the tiller.
12. Record all measurements for future reference.
