

REVELATION 12 - DRAGONID METEOR SHOWER

The purpose of this study is to depict the *Draconid Meteor Shower* that occurs on October 8, 2017. The reason behind this imagery and illustration by way of chart is that many suspect that the Revelation 12 Sign phenomenon is still in play and the corresponding astronomical variables are coming into focus and play. Apparently, this *Draconid Meteor Shower* can be likened to the portion of the prophetic depiction of the Revelation 12 Sign segment that alludes to the *Fiery Red Dragon* that sweeps .33 of the Stars from the Heavens and hurls them down to Earth. In the subsequent studies of the Revelation 12 Sign topic, there has been a surprising amount of 'Dragon' anomalies that seem to have come up. In this case, there is this dual 'typology' that suggests the Revelation 12 imagery in that not only will the Earth pass through the 'tail' of the comet that produced the debris but that it is coming from the 'mouth of the Dragon, the constellation of *Draco* in the Heavens. Astonishing, this comet, 21P/Giacobini-Zinner will be at the point in front of *Virgo* that would 'mirror' the Revelation 12 Sign narrative on October 8, 2017.

What is very peculiar about the meteor shower is that it originates from the fiery mouth of the constellation *Draco* as if the Dragon will be spitting-out 'balls of fire'. Although the Revelation 12 imagery states that it will be the tail that sweeps the Stars down to Earth, there is an approximation of how a 'tail' is nonetheless involved. This 'tail' involves that of the comet that is producing the meteor shower in the first place, as noted. It will be mostly visible from the Northern Hemisphere.

Then there is the conjunction of *Mercury* with the *Sun* in the left forearm of *Virgo*. Lastly, the planet *Jupiter* which has been the key variable in the Revelation 12 Sign studies will be about 5 days out from clearing the line delineation of the *Virgo* constellation. From that point on, it will proceed to trek away to the next constellation of *Libra*. The 'mouth' region of *Draco* is perpendicular to the conjunction of the Sun-Mercury.

The *Draco* constellation is just offset near the *Galactic Center* with the *North Star*. The quadrant is delineated to show just how much .33 of the circumference of the entire *Cosmos* would look like. If one takes the regions wherein the 'tail' of the 'Dragon' is composed of the various Stars, the corresponding section where the Stars would 'fall' would be directly in front of *Virgo*. This is considering the perspective of having *Draco* at the center of the *Cosmos* and *Virgo* along the bottom *Ecliptic*. The breathe of the expanse of the .33 degree range would encompass the area from *Serpens* to *Cancer*. What is also very interesting is that on this day of the 8th of October when the meteor

Sextantids

Another interesting fact about the comet Giacobini-Zinner is that it has a period of 6.6 years. The comet will be positioned at the feet of *Virgo* on 8 October, in-between the legs of *Virgo* as if to devour *Jupiter* that is about to be 'birthed'. Thus, this writer deems the 21P/Giacobini-Zinner body, the 'Dragon Comet'. It has come to light that many believe and are suggesting that the alternate 'birthing' of *Jupiter* will be on Friday the 13th and that coincides with the Jewish Feast of the 8th Day of Assembly called *Shemini Atzeret*.

Comet 21P/Giacobini-Zinner will be at *Right Ascension 14h 47m 34s* with a *Declination* at *-00° 39' 42"* and at a *Magnitude* of *22.02*.
