

Luís Miguel Rosalino, Ph.D.

Since 1999 I have studied mesocarnivores' ecology in Mediterranean Europe (e.g., common genets, Egyptian mongooses, and foxes). However, the main focal species was the European badger. My research interests include mammalian ecology and conservation, Mediterranean forests vertebrate community structure, landscape ecology, and adaptations of carnivores to agriculture, pastoral and forestry systems, in South America and Southwestern Europe. I am currently an Assistance Researcher at the University of Aveiro (Portugal) and I integrate the Editorial Board of the Journal for Nature Conservation.
