

Project: Trial Planning and Design (draft document)

Goal: Greater patient involvement in clinical trial planning and design.

Rationale: Patient voice in trial design and planning can help fine-tune trial parameters to minimize participant risk, increase participation, and keep focus on patient priorities.

Method: Connect with sponsors/collaborators of planned trials to propose patient participation in design of their trials. We can draw on lessons learned from the experience-to-date of patients who have already been involved in trial design efforts.

Project plan (TBD)

- Goals
- Tasks/Deliverables
- Timeline

Project team: If you are interested in joining the project team, please contact _____ for more information.

Notes

By accessing information about planned PD studies that are moving into clinical trials or from Phase 1 to 2 or Phase 2 to 3, patient advocates could approach specific trial teams about collaborating on the design of their upcoming trials. A pilot project could perhaps include planned trials in The Cure Parkinson's Trust - Linked Clinical Trials (CPT-LCT) Programme.
