

Solar Strategies

You knew Solar could do the job: You didn't know how little it could cost, and how fast you can forget about your energy bill for lights, equipment, your entire industrial property.

And you may not have known you could float it on a reservoir, reducing: evaporation, oxygen loss, algae growth, temperature, and chemical reactions.

NEW !! PG&E aggregate metering program allows you to put the solar into one meter on your property, and credit other meter bills. Efficiently using unproductive land.

We would like to give you a proposal. We will give you \$1,000 if the offer is not "significantly" less than any quote you have gotten. Financing Available. Note 30% investment tax credit is ending soon.
