## **ICU Technologies, Inc. Announces Award of GSA Schedule Contract**

*GSA Schedule 84 approval means government agencies can easily purchase custom security solutions critical to protecting and saving Lives*

**Visalia, CA – April 16, 2018** – ICU Technologies, Inc., a Public Safety Security Solutions company, announced today that it has been added to the U.S. General Services Administration (GSA) federal supplier list as an authorized vendor of security and safety solutions to help federal, state and local government agencies with their critical asset protection needs.

The new listing on the GSA schedule will allow law enforcement agencies, school districts, municipalities and federal agencies in all 50 states to quickly gain access to ICU's custom designed security solutions and professional services. GSA schedules are open-ended, five-year contracts listing the prices the government has negotiated to pay for suppliers' products and services. Vendors must pass through an arduous and lengthy review process in order to be approved for GSA listing. Buyers save time and reach better purchasing decisions by procuring through the pre-approved list of suppliers.

"We are excited about the great opportunity this contract affords us to provide government agencies with 24/7 security protection to critical assets, daily operations and emergency response teams," commented Matthew Rieder, President for ICU Technologies. "Now that we hold a GSA schedule our government clients and U.S. citizens will benefit from the essential role that ICU's security solutions provide to contribute to a safer and more secure world."

Government agencies and other organizations using the GSA schedule for purchases may now contract with ICU Technologies through GSA Contract Number 47QSWA18D003K, Schedule 84, Total Solutions for Law Enforcement, Security, Facilities Management, Fire, Rescue, Clothing, Marine Craft and Emergency/Disaster Response. State and Local agencies can procure ICU's security solutions and services through the Cooperative Purchasing Program approved on their GSA schedule contract. Participating government agency customers will benefit from a greatly reduced acquisition timeline, pre-negotiated rates and terms, and can fast track the often cumbersome RFP/approval processes, all of which make selecting ICU Technologies attractive to government decision-makers.

The ICU Technologies GSA sales efforts will be led by, Vice President of Sales, Brian Van Norman and Vice President of Engineering, Everett Kellogg, both of which have a combined 25 years' experience in delivering world-class security technology solutions to government clients. Mr. Kellogg and Mr. Van Norman have experience working for top security integrators as well as globally respected security manufacturers. In their words, "Our combined careers experience coupled with a deep passion for solving mission critical security challenges have fueled our desire to own and operate a company that supports Public Safety within all levels of government agencies."
