

**Zesterra** is being used by professionals throughout the equine industry to help their horses achieve their full potential.

**"Zesterra is amazing!"**

"I have been using it on my rodeo horses and it has worked wonders on them. They look great. I have a mare named "Champagne" that is 19 this year and I have hauled her for the last 13 years. Since putting her on **Zesterra** she drinks better on the road and looks and feels amazing! She seems to get better with age and the help of **Zesterra**!"

- Sean Mulligan, 4-time NFR Steer Wrestling Qualifier

Used and Endorsed by Ivy Conrado and "Tibbie", 2016 AQHA/WPRA Barrel Horse of the Year

## What is Zesterra?

**Zesterra** is an all natural supplement designed for horses during times of stress, such as hauling, heavy training, foaling or periods of extreme heat or cold.

**Zesterra** is safe for all classes of horses including lactating mares and foals.

**Zesterra** encourages feed and water consumption safely and naturally by balancing the pH of the stomach. It can be used as a flavor enhancer for horses that reject water from unfamiliar sources when being hauled to new destinations.

- 80% - 90% of performance horses suffer from ulcers to some degree.
- Ulcers are prevalent in foals.
- Horses with optimal gut health are able to utilize their feed more efficiently.
- A well-hydrated horse performs at a higher level and recovers faster.

## What's in it?

Colloidal silver, corn oil, guar gum, orange extract, onion extract, soybean oil, glycerin, vegetable based fatty acids, natural apple flavoring

## Zesterra Dosing Suggestions

**Horses with Active Ulcers or Symptoms:** Give 1ml per 100 lbs of body weight orally in the AM and PM for 14 days and then reduce to 1ml/100 lbs once a day for 14 Days. Move to a .5ml/100 lbs daily maintenance thereafter. When these horses come under stress use 1ml/100 lbs prior to the event (riding, hauling, weather change, environment change).

**Older Horses/Hard Keepers:** Give 1ml/100 lbs orally for 10 days followed by 0.5ml/100 lbs daily until desired weight is achieved. Once desired weight is achieved, give 1ml/100 lbs two to three times per week to maintain results.

**Ulcer Prone Horses/Horses in Rigorous Training:** Follow the same protocol as outlined above for Horses with Active Ulcers.

**Respiratory Infections/Shipping Fever:** Give 1ml/100 lbs orally daily until symptoms (cough, fever) subside. If antibiotics are prescribed, a daily dose of 1ml/100 lbs should be used for at least 10 days past the last dose of antibiotics.

**Environmental Stress (Extreme Heat, Cold or Disease Outbreak):** Give 1ml/100 lbs orally prior to changes in weather or disease outbreak.

**Colic:** Give 30ml - 50ml orally at the onset of colic. You may use up to 100mls. Please contact your veterinarian if colic persists.

**Hauling:** All horses should receive 1ml/100 lbs orally the day before leaving and every day while away from home.
