

Eating Utensil Holder

The finger holder is for people who feel the difficulty of holding a spoon or fork. Grip action is not required because a side clip tightly holds the spoon or fork instead of you. Able to use a standard spoon with a thickness of around 3mm (handle). The holder fits around fingers and is fixed securely to a hand. This can be fitted to a variety of finger sizes because of its unique shape.

The picture shows a black spoon holder with groves for the fingers to slide in and a spoon fitted in and ready to use in a soup bowl.
