

# CONSTANTINOPLE PLEIADES STAR MAP

The purpose of this illustration is to suggest that the Golden Horn of the ancient city of Constantinople is configured to the Cydonia, Mars pyramid complex. The Martian motif consists of a 7 pyramid Pleiadian City, the giant Pentagon Pyramid and the Face of Mars or that of a supposed mausoleum to the demigod, Ala-lu. What is unique about this 2nd Roman Capital founded by the Emperor Constantine in 330 AD is that the breath of the Horn or peninsula is laid out in the approximate depiction of the Pleiades star cluster corresponding to the 7 hills of the Golden Horn. During the Roman and Byzantium periods, the 7 hills corresponded to various religious monasteries or churches as were with its twin capital of Rome with its 7 hills. The most prominent being the *Hagia Sophia* basilica or Holy Wisdom from the Greek. One of the main reasons the move of imperial capitals was made from Rome to Constantinople was because Rome was being sacked so many times by the northern Germanic tribes. Since the fall of Constantinople to the Muslims in 1453 the various churches have been converted into Mosques. The name of Constantinople was change to Istanbul by the Ottoman Turks who are Asiatic and used the Greek word for 'The City'.

The Golden Horn is in the European site of the *Straits of the Bosphorus*. The other celestial association with this Golden Horn is that it is referencing to the constellation of Taurus in which the Pleiades are situated. In fact, the whole of Anatolia or Asia Minor that comprises the modern nation of Turkey is in a 'bull' depiction of sorts. There are actually 2 rendition of the Pleiades motif encrypted in the Golden Horn. The first has to do with the 7 hill that approximate the layout of the Pleiades star cluster. The 1st Hill corresponds to the tip of the Horn with the various museums and the Hagia Sophia at its base.

## THE PLEIADES

The 5th Hill corresponds to the area of the *Mesih Mehmet Pasha Mosque*. The 6th Hill corresponds to the *Mihrimah Sultan Mosque* and one of the main Gates of the ancient City. The massive wall embankments were called the *Mesoteichion* that protected the city.

The last Hill, the 7th is in the area of the *Topkapi* or area of the current *Civcivzade Mecidi*. What is particular about this Pleiades rendition is that at the area of the convergence correlating to the University area matches up with the star Alcyone.
