**\*Additional Comments #5 lots of ants , nest complete but could not see inside. #6 bird flew out (wren?) as approached nest, but no sure species or if any eggs #10 bird sitting on nest, but species or # eggs not determined #Could not find this birdhouse (we had no map so had to stumble long trying to find houses). Did not remove any nests as we could not see inside to see if there were eggs and could not identify species of birds from nest. Saw a bluebird nearby, but don't know which nest it occupied.**

**Young Status Codes:**

NO = No young present | NY = Naked young | PY = Partially feathered | FY = Fully feathered young | VY = Vocal young, heard only

If eggs or young are present but not countable, enter "u" for unknown.
