

Installation:

For fixing of heavy objects like radiators, shelves, cupboards etc. in plasterboards, gypsum fiber boards, chipboards and other cavity walls

1 Drill 10 mm hole through the board with HSS-drill. Hammer the Rosett flush with the wall

2 Place the screw through the fitting and tighten

3 When the screw is tightened further...

4 ...Rosett forms a strong knot on the back of the board (in the cavity)

note Use Rosett with spacer for mounting of U-shaped shelving systems. The distance is adjustable using multiple spacers

Use grey Expandet Rosett for board dimensions 3-10 mm and especially for narrow cavities

Use blue Expandet Rosett for board dimensions 3-18 mm and 1 layer of plasterboards

Use red Expandet Rosett for board dimensions 18-30 mm and 2 layers of plasterboards

Materials:

Expandet Rosett® is made of Nylon (PA6).
Thread: 30% glass fibre reinforced.
Withstands temperatures from -40°C to +80°C.
Screw: 5.8 steel. Zinc plated min. 5 µm.

Further information:

See overleaf

Advantages:

- Designed for heavy loads in plasterboards.
- Easy fixing - no special tools required.
- Also available without screw.
- Works with same degree of safety in insulated cavities.
- Does not damage the plasterboards.
- Recommended by leading plasterboard manufacturers.
- Useable in all cavity walls.

Since 1993

* Minimum cavity h_f is calculated as highest value of: L - (h + t_{fix}) or L_{bolt} - (h + t_{fix}).
 ▽ When used in ceilings the recommended loads have to be reduced with factor 0,8: 0,8x0,38=0,30 kN.
 ♦ Loads are recommended maximum in plasterboards with 300 mm spacing between each Rosett.
 Safety factor is included (≥ 3). 1 kN ≈ 100 kg.

Note: Is the recommended spacing not applied the load capacity will be reduced.
