

**Fine Fescue Mixture**

# Scottish Crest

## Characteristics

- ✓ Shade tolerant
- ✓ Drought tolerant
- ✓ Disease resistant
- ✓ Good for low maintenance
- ✓ Low growing
- ✓ Fine textured
- ✓ Adaptable to many soil types

## Scottish Crest Advantages

- ✓ Low maintenance turf
- ✓ Low fertilizer & moisture requirements
- ✓ Reduced mowing
- ✓ Improved disease resistance
- ✓ Excellent cold weather tolerance
- ✓ Dark green color
- ✓ Low height of cut

**Scottish Crest** Fine Fescue Mixture is a mixture of improved varieties of Fine Fescue; Chewings, Hard, Creeping Red and Sheeps Fescue. These resourceful species are perfect for use in golf course roughs, out of play areas, bunker surrounds and for low maintenance areas in many different environments.

In addition to the traditional golf applications, **Scottish Crest** can also be used for wildlife cover, roadsides, wildflower areas, and low maintenance slopes for soil erosion.

### Management Tips:

Performs well in sun or shade. 2-4 pounds of N during a growing season is sufficient to produce a healthy turf. First mowing may begin 2-3 weeks after emergence. Best adapted from the transition zone northward, Northwest and Northeast.

### Seeding Rates:

4-6 pounds per square feet or 200-250 pounds per acre. Germination will occur in 7-10 days after seeding under ideal conditions.
