

Paying for phone lines to report Fire Alarm Activity in your Building is an expense that has been eliminated and at No Cost to You!

Honeywell's Cellular Global System for Mobile communication network (GSM) Communicator is now approved for use. **No Land based Phone Lines (P.O.T.S.) Required.** Equipment Searches for Strongest Cell Tower available and connects to it automatically.

During the last hurricane (Mathew) all our Buildings that have GSM remained protected while all other buildings were left unprotected for as long as 2 weeks in some cases.

We cover the \$137.00 per year difference in monitoring for all customers that change over to Cellular Communicator!

Also, **Lightning Protection** on all Buildings that use GSM is covered in your existing Service Agreement! Just one Lightning Strike can take out thousands of dollars of Equipment. Don't be unprotected.

GSM Cellular Network Communicator Installation and Programming is a for **one time** cost of \$750.00 for the Cellular Communicator with no other costs!

We will report to you in written form after completing Installation with phone numbers that can be canceled. We will remove physical phone line. No action will be required by your phone company on site.

Thank You,

Paul Griffin
