Dear Madame City Clerk: Please accept my letter at the attachment for Tuesday’s council meeting.
Thank you for your assistance.
Hope you are enjoying this beautiful fall weather.

Re: Comments for Nov 5th City Council Meeting on Adoption of New Zoning Ordinance

Dear Madame Mayor Perotte and Councilmembers,

Congratulations on getting to the adoption phase of the long-awaited zoning ordinance for the City of Goleta. For those of us who have participated in this effort since 2013, we look forward to its conclusion, as I am sure you do too. I want to thank staff for their endurance and robust and inclusive outreach process; the Planning Commission for the detailed and thorough review of the NZO and accommodating those who showed up at many of their hearings to testify. It was a time intensive effort but worth it!

The two items below were not fully addressed by the last Planning Commission hearing, but deserve further consideration. The first item was only introduced at the very end of the last PC hearing with little deliberation. The 2nd item was not considered but needs to be because of its importance to what the lighting ordinance is trying to achieve. Request the material presented below be added to the applicable NZO sections. Thank you for considering my comments. I hope they have been helpful. Cecilia Brown

Section 17.52.050 Noticing.
Story poles as a form of public notification is additive to any other required on site noticing described in this section. Story poles, as a 3-D visual notice, enhance the public’s, staff’s, and decision maker’s understanding of the nature of a project’s massing in relationship to its surroundings and how it may affect the viewshed and neighborhood compatibility.

Staff’s proposed standard for story poles noticing is: “for all new structures over 20ft in height, except for single unit dwellings.” Circumstances may warrant story poles for other projects: consider them for existing commercial, office, industrial multi-family, mixed use, or single unit dwelling projects where a building height or yard/setback variance or modification or a significant increase in the footprint is requested.” And, if there is a project undergoing DRB review that doesn’t fall into the above categories but DRB believes that story poles are warranted, then that project should be subject to story poles.

Until detailed story pole guidelines and procedures are developed, request this descriptor of the expected outcome for a story pole installation be added where they are mentioned in this section: three-dimensional, full-scale, silhouette structures that outline the location, bulk and mass that a proposed structure will occupy on a site and which accurately outlines the building’s major wall planes, gables and ridges.
Section 17. 35.060  Lighting
This section is a great improvement over the current regulations, particularly with the requirement for a lighting plan. Unfortunately there are some needed numerical development standards missing from the ordinance. Without this information, decision makers can’t determine the compliance of an applicant’s project lighting with the city’s development standards and the intent of the ordinance which is to ensure “Dark Sky” lighting standards.

As an example, the lighting plan requires applicants to provide project “total site lumens.” This is important to know in a lighting plan because this information indicates whether the project site is over lighted. So, if the NZO requires the applicant to provide the info, there needs to be a corresponding NZO standard for decision makers to use to see if the project complies with it. **But, there is no NZO standard for “total site lumens.”** Decision makers can’t evaluate this lighting plan parameter if there is no standard for them to use.

Fortunately, there is a way to remedy this omission. Use the information from the International Dark Sky Association Model Lighting Ordinance (see link below and pages 13 and 25) on how to figure out a standard for total allowed site lumens. Its not rocket science, it just requires the city to make a decision on which standards to use from the MLO and then some easy math to figure out total site lumens for each project when it is reviewed. Therefore, **request the city add a numerical development standard in the lighting ordinance for “total site lumens.”**
