

Heathkit Plastic Emblems

New Product!

Replacement Heathkit emblems are now available! These replace the oft missing emblems that are on many of the older Heathkit equipment.

These emblems differ from the original items in that they fasten to the equipment panel using threaded metal "studs" instead of the plastic extrusions that required either metal clips or actually melting the plastic. Nuts are furnished to use with these studs. This change was necessary due to the manner in which these replacements are manufactured. Each emblem is made by hand using casting resin.

The resin used to make these emblems is more flexible than the original plastic and therefore they should be much less likely to break. Also, due to the fact that each emblem is "hand made" the actual thickness of an individual assembly may differ slightly from the original and from other replacement emblems supplied by Z Communications Company. This should present no problems to the end user.

Standard colors are "chrome" (silver) and black. The "chrome" emblems were used on Heath units like the DX-40 and VHF-1 (Seneca) transmitters. The black emblems were used on units like the DX-35 and DX-100 transmitters. Other colors may be available on special request for an additional cost of \$2.00 per emblem.

Prices are as follows:

For each emblem

\$17.95 each except Texas residents

Texas residents: \$19.43 (includes 8.25% sales tax)

Shipping charges (First Class Mail):

United States add \$2.00 per order (NOT per emblem)

Canada add \$4.00 per order (NOT per emblem)

All other countries please contact by E-Mail for shipping cost at zcomco@sbcglobal.net.
