Welcome To Our Newsletter

The cold weather is here again, how to deal with it and nicely stretch banners during the cold season...

Stretching Outdoors Banners During Cold Weather...and maintain your revenue stream!

Our Stretching Banners Frames work the same way during hot or cold days. The only difference is how the graphic material is reacting to low temperatures.

1) Vinyls - This is the material that will stiffen when the temperatures drop (Under +45 Deg.). The heavier the vinyl the stiffer it will become. A first approach is to decrease the vinyl weight, from 13 Oz. to 10-11 Oz. for example. But the best solution is to switch to outdoor textiles.

2) Textiles - This is the perfect solution for cold weather. You will find 100% polyester material for outdoor banners for these applications. 100% polyester are generally thicker than vinyl of the same weight and very resistant. The usable inks are Direct UV, sublimation, curable latex...In any case, contact your fabric supplier to get their advices and latest available products.

Here, the outdoor 100% polyester textile is fixed on the side of the frame.

This project was done in Ontario, Canada. The polyester textile is easier to install and replace even during a bitter cold.
