

# Vertical Blinds

## Features

- > Full selection of textures, styles and colors
- > An array of vinyl patterns from basic curved to deeply embossed styles, including s-shaped verticals with hundreds of colors to choose from
- > Beautiful fabrics ranging from simple stitchbonds to high fashion weaves and jacquards
- > Clear Magic Insert Groovers combine the softness and fashion advantage of fabrics with the functional benefits of vinyl
- > Durable, heavy-duty headrail system keeps vanes permanently aligned and offers smooth traversing and quiet operation
- > Standard full valance adds elegance and a more tailored look. Valance corners are gently rounded to provide a smooth appearance
- > Limited Lifetime warranty ensures your customers' satisfaction

## Vane Styles

- > Curved Vinyls – Durable yet fashionable vane style offered in a diverse selection colors and textures including embossed, matte, smooth, and ink wash finishes. Vinyl vanes provide total privacy and light control versatility.
- > S-Shaped Vinyls – Offering the same desired characteristics of curved vinyls, but with an s-shaped vane design that presents a dimensional, drapery-like appearance. The interlocking vanes block out more light than the traditional curved vanes.
- > Decorative Fabrics – A classic selection of fabrics ranging from traditional stitchbonds to translucent fabrics, string patterns, and grass-like weaves, in a variety of opacities from soft, light-filtering to room-darkening opaque.
- > Free-hanging With Sealed-in Weights – Ultrasonically sealed-in weights, standard on all fabric free-hang vertical blinds, keep the vanes hanging taut and straight.
- > Fabric Inserts – Insert Groovers, offered on most fabric vane styles, feature a soft fabric look while providing an added degree of privacy, energy efficiency, light control, and a uniform appearance from the outside. Available in both white and ivory, the groove edges are guaranteed to remain clear for the lifetime of the vertical blind.

## Standard Valance

A full valance with vane insert comes standard to cover the headrail and add a finishing touch. Valance corners are rounded to provide a softer, uninterrupted appearance.

## Control Options

- > STANDARD CHAIN AND CORD CONTROL

The chain tilts the vanes open and closed and the cord traverses the vanes across the window. Both come  $\frac{3}{4}$  of the height of the blind. Longer lengths are available upon request.

- > OPTIONAL SAFETY WAND

A single, easy-to-use wand, available at no additional charge, provides both traverse and rotational vane control. A simple twist of the wand rotates the vanes open and closed. Pulling the wand across the blind draws the vanes back and forth. By eliminating the cords and chains, the safety wand helps protect children and pets from injury.

## Hardware and Installation

- > Durable headrail – extruded aluminum track with high-quality wheeled-carrier system that offers smooth traversing and quiet operation. Self-aligning carriers keep vanes permanently aligned.
- > Snap-in mounting brackets – make installation fast and easy.
- > Extension brackets – feature notches that take the guesswork out of lining up bracket positions.
- > Front loading universal inside/outside mount valance clips – easily twist in place to allow for easy installation of the valance after the blind is installed.
- > Bottom chains – available on any free-hang fabric or vinyl vertical blinds upon request to keep vanes in line and connected together.
