Naqi Neural Earbuds- An Upcoming Product

The Naqi Neural Earbuds, ready for manufacturing partners, allow users to command, control, and navigate computers, digital devices, smart home devices, robots, and wheelchairs without voice, touch, screens, or cameras. They can control almost anything digital.

The neural earbuds create a new silent and invisible input methodology for elderly and disabled people. They are a safe, non-invasive alternative to brain implants.

Our **hands-free, voice-free, and screen-free** Human-Machine Interface represents a major paradigm shift, offering a powerful new command and control capability that no other earbud or wearable offers. NAQI provides users with the power to control their PCs, Macs, and mobile devices in a manner that rivals brain implants for those who can move above the neck. A product design to be followed!
