

Rain Barrels

Every resident can do their part in water conservation by collecting roof runoff and lessen storm impact

St. Clair Shores Waterfront
Environmental Committee

Key benefits of rain barrel implementation at your home:

- ◆ Reduce roof rainwater runoff that would otherwise become stormwater runoff, filled with pollutants (e.g., soil, lawn fertilizer, pesticides, animal waste, etc.)
- ◆ Lessen storm impact on flow rates to local drainage infrastructure
- ◆ Minimize downspouts erosion that potentially poses a risk to house foundations
- ◆ Save drinking water resources and expenses
- ◆ Provide an excellent plant water source as it does not contain the chemicals or fluoride found in tap/city water

Visit www.scswec.org or @scscitygovt City Hall to inquire about a rain barrel purchase for your home (available to St. Clair Shores residents & non-resident).

Proceeds support the St. Clair Shores Waterfront Environmental Committee projects and scholarship programs.
