Welcome to Connelly Angus!

Welcome to our 31st Annual “Genetics for the Long Run” Production Sale. This year’s sale offering promises to be one of the most exciting ever. The bulls selling represent the top 49% of the calf crop. The replacement heifers we are offering are a top end selection from the heart of our herd.

As I look back on the year 2021, we definitely experienced a drier summer than we would have liked. We were very fortunate to not be in as extreme of drought as it was east of here. Our hay crops were considerably shorter than normal. It definitely tested the cattle genetics as well as the human sector on the ranch. Our cattle must get by on what mother nature dishes out without any supplements. This tests the fertility and longevity of your cowherd and the genetics you sell. We are very proud of the proof of this by the 26 Pathfinder cows in our program, a huge indicator of the quality of the cowherd.

When you look at all the different agriculture commodities out there, the cattle business has the most positive outlook for the future. When you study the dynamics of the industry, there are quite a few really good years ahead for the rancher to enjoy.

A high percentage of the bulls selling are calving ease bulls that will work great on heifers or cows without giving up weaning weights or performance.

The heifers selling represent top prospects in each sire group from cow families that have stood the test of time. These heifers are developed the same way we do on our own replacements to insure their future soundness and production.

Our breeding philosophy has always been centered around producing problem free females with excellent longevity that can survive and excel in a commercial rancher’s environment. This can only be accomplished with females that have excellent structure, feet, superior udder and teat qualities. We believe in a moderate framed cow that milks well while holding her condition and can consistently wean off a heavy calf. In our program, we place high emphasis on fertility, carcass quality, natural thickness, maternal traits, fast growth, quiet dispositions and moderate birth weights. At Connelly Angus we have been stacking cow families with these characteristics to produce an elite cowherd that can produce a consistent and quality product. We are focusing on bloodlines that leave you with females that can bring in a good calf year after year for the long run. You cannot build a cowherd and get ahead with a high percentage of open young cows.

Our steers carcass data came back with the group grading 100% choice and 26% prime this past year. This shows our cattle have the carcass genetics to improve any program.

The bulls have been developed on a high roughage ration to grow out, NOT FATTEN. Their ration was designed for a 2.75-pound ADG. They are very athletic and should be able to cover a lot of country. All bulls will be veterinary inspected, and semen tested before sale day by Dr Wade Spears, DVM.

We have decided to utilize genetic enhanced EPD’s through Angus GS DNA technology on the entire sale offering again this year. You can read more about this on page 4 of this catalog.

Our sale will be broadcast on DV Auction this year for those who cannot attend the sale. We also have a limited number of phone lines to utilize if you would like.

All cattle sell with the Connelly Angus guarantee. If you are unable to attend the sale, we offer a sight unseen satisfaction guarantee on the sale offering. We invite you to come join us on Tuesday, February 22 and have lunch, visit and enjoy the day. All cattle are available for your inspection at the ranch before the sale and on video at our website. If we can offer any additional information or assistance, feel free to contact us.

Sincerely,
The Connelly’s

***Everyone is invited to a
Pre-Sale CAB Prime Rib Dinner
Monday, February 21, 6:00 pm
at the Ranch, North of Valier.***

Cattle are available for preview all day before dinner.

Common Sense Ranching

At Connolly Angus we have always bred cattle realizing that the Angus female is the key to making the most out of your ranch's operation. We have focused on bloodlines and cow families that have proven bred in longevity.

We strive to breed cattle that will excel and survive in a low input environment not cattle in a artificial environment with extra supplements, creep feed and extra management. When mother nature gives you a good year, the calves will really weigh up for you. More importantly in those dry tough years if your cow herd has the right genetics, your cows can still bring in a good calf and breed back on time without those costly extra inputs. The wrong bloodlines and/or high powered, high input genetics can really cost you in those tough years if you want them to stay in your herd and avoid a high percentage of open cows. There are plenty of high input genetics out there that will cost you lots of extra dollars in the good years!

We take pride in proving to our customers the history behind the bulls they buy. You will find ratios on all the measurements we take in developing the bulls. You will find generations of cow production records behind the bulls to help aid in your selection. We believe the best genetics are found over time through a cow producing a good calf year after year through ten plus years while maintaining soundness & udder quality and proving there is actual bred in longevity. There are great financial rewards in using the right genetics.

When you buy a bull for your program without any performance ratios or cow family history, you really have no idea what you are in for. You don't know if you are improving what you already have or in for a big costly disappointment down the road.

Survival in today's ranching atmosphere allows for few mistakes. Look to add the genetics to your program that will give you the biggest returns and keep you going for the Long Run!

First Year Breeding Guarantee

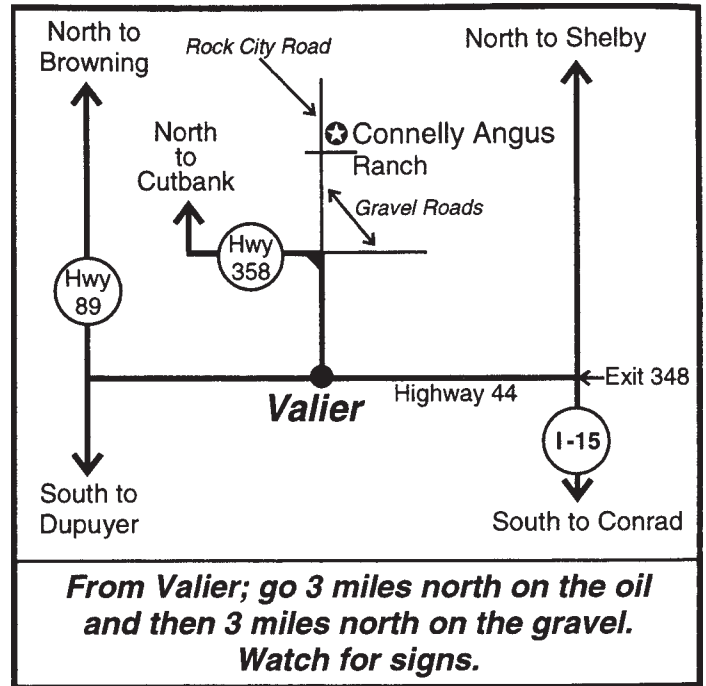

All bulls selling for \$3000 or more will be covered 50% by Connolly Angus, if they are injured during their first breeding season and not able to return to service during that first breeding season. Breeding season is defined as the 90 day period following the first turnout of the bulls.

50% of the value of the injured bull, minus one-half salvage value, will be given as credit in a future sale or toward a replacement bull if one is available. Salvage value, if any, will be split equally between Connolly Angus and the buyer. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2022.

Example 1: A \$6000 bull is injured, a credit of \$3000 minus one-half any salvage value will be given to the buyer.

Example 2: A \$4000 bull is injured, a credit of \$2000 minus one-half any salvage value will be given to the buyer.

Example 3: A \$2500 bull is injured, no credit is given. Buyer retains all salvage value.

Visitors are always welcome to stop by and see the cattle at any time. Give us a call and we'll turn on the coffee pot!

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 10-36 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	26	Heifer Pregnancy	17
Birth Weight	23	Calving Ease Maternal	20
Weaning Weight	27	Milk	36
Yearling Weight	23	Mature Weight	15
Dry Matter Intake	12	Mature Height	9
Scrotal Circumference	15	Carcass Weight	15
Docility	12	Yearling Height	17
Claw Set	10	Carcass Marbling	11
Foot Angle	10	Carcass Ribeye	17
		Carcass Fat	14

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs

He was the \$18,500 high selling bull out of a CAR Duke 104 daughter in our 2006 production sale to Knoll Crest Farms and Baldrige Brothers. A 1/3 interest sold for \$35,000 in Baldrige dispersal to put a \$105,000 value on CAR Efficient 534. Efficient 534 is an excellent outcross calving ease sire with moderate mature size whose progeny perform with added thickness, fleshing ability and carcass values. We are very impressed with the quality of the Efficient daughters and their excellent dispositions. Sons are topping sales across the country out of his daughters.

CAR Chinook 786 was the \$30,000 high selling bull in our 2008 sale to Darwin Peckham in South Dakota. His dam is a full sister to the \$14,500 high selling bull in our 2007 sale. When you study this bull's cow family's production records, fertility, performance and incredible longevity; he shows tremendous potential to be a breed changer. He is a proven calving ease bull with CED of +13 who stamps his progeny with his likeness. His daughters are moderate statured, big ribbed, are excellent mothers, have super udder and teat quality and have quiet dispositions. They are fertile, breed back on time and hold their condition well in a low input environment. An outcross bull to use on your heifers and realize the value through bred in performance, carcass, fertility and bred in longevity. Semen available through Genex.

+0.34	+0.65	+0.017	+86	+66	+61	+37	+98

365 wt - Weaning weight adjusted to 365 day weight to allow comparison among individuals

ADG - Average Daily Gain

YR - Yearling Ratio used for within herd comparison

Scrotal - Adjusted scrotal measurement

Calving Ease Direct EPD (CED) - Expressed as a difference on percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. Predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW) - Expressed in pounds, is a predictor of an individual's ability to transmit birth weight to his progeny compared to that of other individuals.

Weaning Weight EPD (WW) - Expressed in pounds, is a predictor of an individual's ability to transmit weaning growth to his progeny compared to that of other individuals.

Maternal Milk EPD (Milk) - A predictor of individual's genetic merit for milk and mothering ability compared to other individuals. It is that part of a calf's weaning weight attributed to milk and mothering ability.

Yearling Weight EPD (YW) - Expressed in pounds, is a predictor of an individual's ability to transmit yearling growth to his progeny compared to that of other individuals.

Scrotal Circumference (SC) - expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Marbling EPD (Marb) - Expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE) - Expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat) - Expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Maternal Weaned Calf Value (\$M) - An index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W) - An index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F) - An index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G) - an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B) - an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

+0.27	+0.19	+0.032	+55	+53	+87	+27	+114

Excellent ratios on this high gaining calving ease prospect by Remarkable.

HOW MUCH MORE CAN A RANCHER AFFORD TO PAY FOR A TOP BULL?

Increase in weaning weight from top performing bull per calf.

X Number of cows covered per year

X Number of years used

X Selling price of calves

= *Extra you can afford to pay for a better bull*

Example: A bull who can add 30 lbs to your weaning weights X 25 cows per year X 4 years of use X \$1.50 per lb = \$4,500

This example shows that this bull is worth \$4500 more than the average bull that keeps your weaning weights the same.

This formula does not take into account the extra value realized through genetics that have been developed to survive and excel in a low input environment. The replacement heifers that have that extra fertility and bred in longevity to give you those extra years of production. The feedlot gain and improved carcass quality that helps you to market your calves. All of these items add to your bottom line and help your outfit to survive and prosper. Put your own figures into this formula and see what you come up with.

+.67	+.37	+.046	+60	+66	+65	+46	+111

Strong producing cow family behind this good numbered Butkus son with appealing carcass values.

HOW MUCH MORE CAN A RANCHER AFFORD TO PAY FOR A TOP BULL?

Increase in weaning weight from top performing bull per calf.

- X Number of cows covered per year
 - X Number of years used
 - X Selling price of calves
- = **Extra you can afford to pay for a better bull**

Example: A bull who can add 30 lbs to your weaning weights X 25 cows per year X 4 years of use X \$1.50 per lb = \$4,500

This example shows that this bull is worth \$4500 more than the average bull that keeps your weaning weights the same.

This formula does not take into account the extra value realized through genetics that have been developed to survive and excel in a low input environment. The replacement heifers that have that extra fertility and bred in longevity to give you those extra years of production. The feedlot gain and improved carcass quality that helps you to market your calves. All of these items add to your bottom line and help your outfit to survive and prosper. Put your own figures into this formula and see what you come up with.
