

Bee-Haven   
**RAW** 100% PURE  
 FLORIDA HONEY

From start to finish, we produce and package three separate varieties of natural honey: Orange Blossom Honey, Gallberry Honey (otherwise known as wildflower honey), and Florida Allergy Blend Honey. Each is also associated with its own unique and flavorful taste.

**Orange Blossom**

The renowned citrus ridge that runs through the middle of the Sunshine State is the perfect place for our bees to produce the most delightful orange blossom honey anywhere in the world. We place our bees in these orange groves so the honey we produce is very sweet with that distinctive citrus undertone.

**Gallberry**

Gallberry honey is a bit milder than orange blossom honey, making it more preferable to some. Ours is extra special because it's enhanced by many wildflowers that grow in the Osceola National Forest. Bees that have access to gallberry bushes produce a very mild, light-colored honey which is very smooth, and always enjoyable.

**Florida Allergy Blend**

Did you know that raw local honey may provide relief from seasonal allergy symptoms? Because this honey contains local pollens, regular consumption allows your body to build antibodies. All of our honey is natural and unprocessed, which means that it goes straight from the hive to your jar. Our Allergy Blend is suitable to treat symptoms for those living in central to north Florida.

**Bee-Haven Raw**  
 All our honey is unprocessed, going from the hive to the jar with minimal handling. We believe in the natural and healthy properties of raw honey and never want to remove any of them from our product. Local honey is not only loaded with antioxidants, but it is also great for the prevention of allergies and is the healthiest alternative to processed sugar. Once you try Bee-Haven honey, we guarantee you will come back for more!
