

Ft. Jackson Battalion Headquarters

Truss Link partnered with Ryeco Drywall to help Alutiiq develop this fast track project. This +/- 30,000 structure was a panelized load bearing wall system with light gauge steel trusses. The walls and trusses were set and decked/sheathed in approximately 6 weeks in one of the rainiest winters on the books. K&P Engineering produced shop drawings for both Truss Link and Ryeco which allowed for a very efficient framing system and minimal field design errors. Despite the weather, this project came in on schedule at budget.

Location: Columbia, SC

Contractor: Alutiiq

Design Partner: Ryeco Drywall

Contract Amount: \$293,992

Approx Sqft: 29,296

Delivery Method: Design/Build

Scope: Site-fabricated trusses

Metal roof deck
