

Diesel Light Towers

Nothing is more important to your night time event than adequate lighting, and nothing will provide better lighting than our diesel powered 4,000 watt lighting towers. For safety, security or just event ambience these are the answer.

Powered by quiet diesel engines they feature 6,000 watt + generators and light up four, 1,000 watt metal halide lamps. They are mounted on crank up booms that will lift them 20+ feet into the air to greatly expand the area of illumination. Under the right circumstances one of these units can cover acres and they will run multiple nights without refueling.

Easy to operate and tow (normal 2" ball) don't have a night event without some of these.

Optionally available are AC power cables and distribution boxes to enable you to use them as generators during the day.
