SWING GATES

Mechanical and electric locking swing gates are a popular alternative to turnstiles. They provide a clean look and added security features such as the EMERGENCY BREAKAWAY feature that allows these units to meet any building and fire code regulations.

3-ARM TURNSTILE

The 1100 series of classic 3-Arm waist-high turnstiles provides an excellent means of controlling and counting the flow of pedestrian traffic in and out of your facility. Heavy duty construction and the latest in materials and manufacturing techniques ensure years of trouble-free operation.

3-ARM DROP

The Drop-Arm Turnstile also provides an excellent means of controlling the flow of pedestrian traffic in and out of your facility. This turnstile functions the same as our standard 3-arm turnstile however, the horizontal arm drops in case of emergency or power failure. It allows for one or two-way passage, set at the manufacturer.

4-ARM TURNSTILE

The 4-Arm Turnstile offers an excellent means of creating a flow in one direction allowing customers easy entry while discretely directing them to exit at a monitored location. A properly designed and installed Turnstile and Railing system can improve security and reduce losses.

SYSTEM DESIGN SERVICES

Passport Technologies offers a complete range of controlled access products, including: mechanical barriers, doors, turnstiles and electronic barriers. All our products are sourced from proven and reliable North American manufacturers. Modular posts, rails and other off-the-shelf components combine with turnstiles and gates to create a clean, functional and custom entrance system. Not sure what your facility requires or how to design your floor plan, trust Passport Technologies experts to design and propose the right equipment for your application.
