The annual and special assessments, together with interest, costs, and reasonable attorney's fees, shall be a charge upon the Lots and shall be a continuing lien upon the Lot against which each such assessment is made. Each such assessment, together with interest, costs and reasonable attorney's fees, shall also be the personal obligation of the person who was the Owner of such Lot at the time when the assessment became due. The personal obligation for delinquent assessments shall not be passed to successors in title unless expressly assumed by them.

Section 2. Annual Assessments; Purpose of Annual Assessments; Certain Increases in Assessments. The Association shall, upon demand, and for a reasonable charge, furnish a certificate signed by an officer of the Association setting forth whether the assessments on a specified Lot have been paid. A properly executed certificate of the Association as to the status of assessments on the Lot is binding upon the Association as of the date of its issuance.

The lien may be enforced and foreclosed by action or advertisement in the same manner in which mortgages may be foreclosed in Minnesota. The lien created by this Declaration shall be subordinate to the lien of any first mortgage to provide financing (or refinancing) of any Lot or improvement thereon, and any first mortgagee, or its successor in interest, which obtains title to a Lot by foreclosure or deed in lieu of foreclosure of a first mortgage shall not be liable for unpaid assessments which have accrued prior to acquisition of title to such Lot by such first mortgagee, or its successors in interest (in the case of a deed in lieu of foreclosure) or prior to the expiration of the statutory period of redemption (in the case of a foreclosure of a first mortgage).

Fasteners: All fasteners shall be stainless steel with zinc dichromate plating for enhanced corrosion resistance. Phillips head screws shall be used to attach the pickets to the

rails while self-drilling, self-tapping Phillips head screws shall be used to connect the rails to the posts. All screw heads shall be painted to match the finish of the fence.

C. Accessories: All castings used for post caps, finials, scrolls, and latches shall be made from either zinc or aluminum. Only stainless steel fasteners may be used with these accessories.

2.03 Finish:

A. Pretreatment: Before the finish is applied, a five-stage Pretreatment must be applied to assure maximum adhesion and corrosion resistance:

Stage 1: High alkaline cleaner to prepare the surface

Stage 2: Water rinse

Stage 3: Combination of chromic, phosphoric and hydrofluoric acids that produce the chrome-phosphate conversion coating for maximum adhesion and corrosion

Stage 4: Water rinse

Stage 5: Water rinse

B. Coating: After the Pretreatment, the metal is dried and the paint is then applied. The fence system shall have an electrostatically applied baked on flexible acrylic finish that meets or exceeds industry standard tests.

C. Tests

1) AAMA 603 (covers test procedures for pigmented organic coatings on extruded aluminum)

2) AAMA 605 (covers high performance organic coatings on architectural extrusions and panels)

3) ASTM D2247 (Humidity resistance of 1,000 hours)

4) ASTM B117 (Salt spray resistance

of 1,000 hours)

5) Accelerated weathering for 500 hours under Method 6152 of Federal Test Method 141 shall show no adhesion loss, with only slight fading, chalking and water staining.

6) Outdoor weathering shall show no adhesion loss, checking or crazing, with only slight fade and chalk when exposed for one year in Florida facing south at a 45 degree angle.

7) Minimum hardness of 2H using ASTM D3363

2.04 Construction:

A. Horizontal rails: Rails shall be 1" square channel for residential and X'tra grades or 1-5/8" square channel for commercial grade. Pickets shall pass through holes punched in the top of the rail. The rail shall have a top wall thickness of .055" (residential and X'tra) or .070" (commercial) for added vertical load strength. The number of rails will vary according to grade, height and style.

B. Pickets: Pickets shall be fastened to the rails using stainless steel screws painted to match the color of the fence. Screws shall be used on only one side of the rail, leaving the other side with a clean appearance. Pickets shall be 5/8" square with a .050" wall thickness for residential, 5/8" x 1" with a .050" wall thickness for X'tra and 1" square with a .065" wall thickness for commercial. Welding the pickets to the rails will not allow the fence to rake and is unacceptable.

C. Posts: Posts shall be 2" square with a .100" wall thickness for residential and X'tra or 2-1/2" square with a .075" wall thickness for commercial. Gate posts for residential and X'tra shall be 2" square with a .125" wall thickness, while commercial gate posts shall be

4" square with a .125" wall thickness. A gate requires a gate post on both sides. A cast aluminum post cap comes standard with all posts.

D. Gates: Swing gates, Rolling gates and cantilever gates shall be fabricated according to the manufacturer's standard methods. Walk gates shall be self-closing and self-latching.

E. Strength: Assembled sections must be able to support a minimum of 300 pounds (residential and X'tra) of vertical load at the midpoint of any horizontal rail without permanent deformation, while commercial grade must be able to withstand a minimum of 1,000 pounds without permanent deformation. Residential strength is available in heights of (3, 3-1/2, 4, 5, 6) feet. X'tra strength is available in heights of (4, 5, 6) feet. Commercial strength is available in heights of (4, 5, 6, 7, 8) feet.

2.05 Warranty:

The entire fence system shall have a limited lifetime warranty against defects in workmanship and material while the finish must also carry a limited lifetime warranty against cracking, chipping or peeling.

Part 3 Execution:

3.01 Installation: All material must be checked upon receipt at the job site prior to installation to check for any damage that may have occurred during transport. The fence system must be stored in a safe and dry environment so as to protect it from any potential damage. This aluminum Ornamental Fence system must be installed in accordance with manufacturer's standard procedures.
