

Custom Puzzle Furniture

Over the years, I have been approached countless times to produce furniture pieces with puzzle elements to them. I have always had to turn down such commissions, as my equipment and tiny shop size just don't accommodate the crafting of furniture.

Fortunately, I have stumbled upon a solution, and it comes under the name of Craig Thibodeau. Craig is a world-class furniture designer, with exceptional talent in both inlays and marquetry. If you don't recognize the name, you would likely recognize his work, as Craig's cutting-edge, automated opening, furniture designs have circulated through Youtube, social media and e-mail forwards for years.

I recently worked alongside Craig on a puzzle cabinet commission that, once completed, will exceed anyone's wildest expectations of what a cabinet can be. We work seamlessly together. Craig takes care of the crafting and design of the furniture, while I address sequential movements and puzzle elements/mechanisms. All finished pieces would display both the Stickman and Craig Thibodeau hallmarks, so you get the talent of two artists in one.

If you have ever been interested in a commissioning a piece of high-quality furniture, (with well designed puzzle and/or automated elements), all tailored to the specifications of your personal taste, then kindly check out Craig's website at <http://ctfinefurniture.com>.

If you like what you see, commission projects can be set up with Craig through contact information on the website, and Craig and I can then work together to bring your wildest visions into existence.
