

# Get Serious in Disaster Restoration about Ultrasonic Contents Cleaning

***Any Size • Any Feature • SAFETY FIRST with our Pneumatic Lift System***

Hessonics Ultrasonics has over forty years of ultrasonic systems engineering, design, and manufacturing experience. We're not just another company that puts their name on someone else's product. We have been custom designing ultrasonic cleaners to client specific needs for more than four decades. One size or design does not fit all needs. We have designed and built machines specifically for your application in the disaster restoration industry. Let us build the ultrasonic cleaner or complete system to specifically fit your production space needs. Our quality is in the design, engineering and manufacturing, using only first quality electrical, mechanical and pneumatic components. One of our best standard features is our Marine Edge "anti-drip" counter tops. The benefit is in keeping the water in the tank and not on the floor. A Hessonics disaster restoration ultrasonic cleaner or system will increase productivity, reduce labor costs and increase profitability.

## **Features**

- Any size and shape tank
- All tanks with Marine Edge Anti-Drip counter tops
- Pneumatic lift platform for enhanced safety
- Multiple 500 watt generators for reliability
- Recirculating filtration pump with "Power Flush"
- Single power circuit connection point
- NEMA water proof electrical box with EPO
- Industrial grade casters
- Extendable warranties & service contracts

*Any of our machines can be built with the pneumatic lift system. It provides for safer operation and reduces operator lifting injuries*
