# EMERGENCY EYEWASH & SHOWER EQUIPMENT

**WATER TEMPERING PRODUCTS** are designed to meet ANSI standard Z358.1 requirements to deliver "tepid" water to injured workers. In addition to discouraging use of a safety flushing device, a 15-minute deluge of cold water to the injured worker can negatively affect core body temperature, and hypothermia can result. Therefore, ANSI standard Z358.1 requires emergency showers and eyewashes to deliver "tepid" water. ANSI defines "tepid" water as 15.6°C to 38°C (60-100°F). Tempering solutions include steam, instantaneous (on demand) heaters and thermostatic mixing valves (TMV's). TMV's blend hot and cold water to meet strictly specified water temperature ranges.

## EMERGENCY FIXTURE TANKLESS WATER HEATERS

- Performs when needed and quickly provide an unlimited supply of warm water
- Reaches the ANSI standard Z358.1 requirements for tepid water temperatures in as little as 20 to 30 seconds
- Patented temperature control system and multiple safety features like internal fusing, digital temperature control, Incoloy 800 sheathed heating elements to eliminate the "cingle" effect, and an externally mounted emergency stop button
- Precision engineered for optimal performance
- Features rugged industrial components from high quality copper and brass tested to 300 PSI, to increase the life of your heater
- Large internal passageways engineered into every heater minimize pressure drop, so there will be no large temperature swings; if the water flow changes drastically, you will not have to be concerned with scalding
- Easy to install anywhere – all you need is access to one electrical connection and a cold water line
- Splash proof NEMA 4 enclosures are constructed for either indoor or outdoor use
- These energy efficient heaters perform on demand and only require water and power once activated
- No mixing valves required

# EMERGENCY EYEWASH & SHOWER EQUIPMENT

**PORTABLE EYEWASHES** provide self-contained fluid where plumbed water is not available. Gravity-fed or pressurized portable eyewash systems should deliver the ANSI minimum 15-minute safety eyewash drench. To keep water stored in these portable systems safe for ophthalmic use, an antibacterial agent is included or available separately. These units often can be freeze protected for outdoor applications. Portable eyewash stations installed in temperatures below 16°C will need to be of a tempering design to maintain compliance with ANSI standard Z358.1

## COMBINATION PADLOCKS

Master Lock has reinvented the combination padlock with our new Blockguard™ technology. This patent-pending "Anti-Shim" technology deters shimming a padlock - shimming is a method of violating a lock by inserting a specially designed tool into its latch mechanism. Blockguard™ has unique flat latch technology that blocks typical shimming tools from opening the locks and thus deterring break-ins.

- These combination padlocks feature the new Blockguard™ anti-shim technology
- Double-reinforced stainless steel case with cold-rolled steel construction shields locking mechanism from physical attack
- Hardened steel shackles resists cutting and prying
- 40 number, 3-number dialing provides thousands of possible combinations available
- Dial automatically locks under shackle tension to prevent "feeling out" the combination and automatically scrambles when closed to prevent accidental opening
- Fits lockers with a padlock eye of at least 5/16" (8 mm) in diameter

### PF-CARDSTOCK TAGS

Tear-resistant and waterproof tags last longer than standard cardstock tags.

Tags are pulp-free – no wood pulp or paper content – unlike regular cardstock. They are pliable, yet will not rip or breakdown in moisture.

Tags do not tear readily when tugged on. Ideal for indoor use and short term outdoor exposure. The scuff-resistant, matte surface is easy to write on.

- 10-mil polyolefin-based material
- Thin and flexible
- Top has 3/8" plain hole

### RP-PLASTIC TAGS & HS-LAMINATE TAGS

Durable tag withstands pulls and tears in dirt and grease environments.

Plastic tags are water-resistant – to withstand weather conditions.

The rigid plastic is flexible, yet will not readily break down over a wide temperature range. Good for indoors and outdoors use. Writable surface is abrasion resistant.

- 15-mil rigid plastic material
- Flexible, yet durable – withstands stretching and ripping
- Top has 3/8" hole reinforced with metal grommet to prevent pull off

### HS-LAMINATE TAGS

Tags are designed to withstand tough and abusive conditions.

HS-Laminate is a composite of all poly materials hard sealed on both sides with no edge seams. Matte surface is scratch resistant, yet easy to write on. Waterproof tags are ideal for extreme weather conditions.

- Tear-proof, weather-proof, chemical-resistant material withstands dirt and grease environments
- Thick laminate stands up to abuse and rough handling
- 3/8" top hole is reinforced with a pull-proof, metal grommet

# SAFETY SIGNS & IDENTIFICATION

## ACCIDENT PREVENTION SIGNS

The Occupational Safety and Health Administration (OSHA 29 CFR§ 1910.145) provides specifications, design, application and use of header signs. These signs are intended to indicate potential, type and degree of the hazard that may lead to accidental injury or property damage. They define specific hazards by conveying a clear and rapidly understood message.

### ACCIDENT PREVENTION HEADERS

**DANGER** — Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations. The signal word Danger should not be used for property damage hazards unless personal injury risk appropriate to the level is also involved.

**WARNING** — Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. This signal word should not be used for property damage hazards unless personal injury risk appropriate to this level is also involved.

**CAUTION** — Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices that may cause property damage.

**NOTICE** — Indicates a statement of company policy directly or indirectly related to the safety of personnel or protection of property. This signal word should not be associated directly with a hazard or hazardous situation.

**SAFETY FIRST, THINK, EMERGENCY** — Indicates general instructions relative to safe work practices, reminds of proper safety procedures and indicates the location of safety equipment.

### ACCIDENT PREVENTION SIGN CONTENTS

#### Header

A specific or "signal" word (or words) to designate a degree or level of safety alerting, always located in the uppermost portion of the sign. Intended to capture and direct attention to the potential hazardous situation.

#### Legend

The specific short message conveys the need to pay attention to a potential hazard or hazards, or take a necessary action to avoid such hazard(s).

Many signs consist of just header and legend — Signs can also contain a symbol...

#### Symbol

Pictorials are graphic representations to clearly convey a specific alerting message compatible with and supplemental to the legend message. Universal in design, many are standardized to be easily understood.

## CANADIAN STANDARDS ASSOCIATION IDENTIFICATION SAFETY SIGNS

Communicate regulatory, warning, or informational messages in a symbol to employees and visitors in the workplace. Use Canadian Standards Association (CSA) Z321 symbols designed to be easily understood for specific safety and/or health hazards. Symbols are divided into three classifications with each containing two sub-groups - for a combination of six colours and three shapes.

### 1. REGULATORY

**1.1 PROHIBITION**  
Forbids an Action  
(red and black  
on white)

**1.2 MANDATORY**  
Requires/Obligatory  
Action  
(white on black)

### 2. WARNING

**2.1 CAUTION**  
Potential Hazard  
(black on yellow)

**2.2 DANGER**  
Definite Hazard  
(white on red)

### 3. INFORMATION

**3.1 EMERGENCY**  
First Aid, Health, Fire  
Protection, Fire Fighting, and  
Emergency Equipment  
(white on green)

**3.2 GENERAL  
INFORMATION**  
Permission or Public  
Information  
(white on blue)

## CSA SIGNS

Safety Signs meet the Canadian Standards Association (CSA) Z321 standard for Signs and Symbols for the Workplace. Signs contain symbol with text to provide flexibility in conveying the sign message. The safety symbol is contained in a geometric shape with accompanying colours. These are uniform designs for an easily understood sign. The particular shape and colour combination distinguish the type of safety classification category. These attention-getting signs communicate the text safety information message. Signs measure 355 mm x 254 mm (14" x 10").

Available in English Only, Bilingual French-English, and French Only formats.

## ISO SAFETY LABELS

- Communicate safety using internationally recognized labels as set forth by the International Organization for Standardization (ISO)
- Shapes and colours distinguish the type of safety
- Symbols communicate the specific safety message
- Adhere to documents, machinery, packaging and other areas requiring safety symbol messages
- Compliant to ISO 7010:2011 standard

High-performance, self-adhesive vinyl with overlaminated graphics for long wear and durability. Available in two sizes — specify when ordering.

ISO labels are available in three categories distinguishable by their shape and colour format:

**Mandatory - take action to avoid the hazard.**

**Prohibition - forbid an action to avoid the hazard.**

**Warning - identify the hazard to avoid.**

## PIPE MARKERS – WHAT YOU NEED TO KNOW

The proper marking of contents and flow direction in pipes and piping systems is a vital component of a thorough safety and identification program.

A13.1 – 2007 scheme for the identification of piping systems... A uniform system for the identification of piping contents has been established to warn personnel when the piping contents are inherently hazardous... This standard has been prepared to specify the identification of the contents of piping systems on the basis of legends, it also suggests the use of colour as a supplementary means of identifying the type of hazard of the material contained in the system.

Pipe markers are designed to meet or exceed ASME (ANSI) A13.1-2007 recommendations for size, colour and visibility.

Pipe markers are quick visual cues, providing immediate identification information of pipe contents for emergency responders and workers to safely carry out their responsibilities when working in and around piping systems.

The legend or wording on the pipe marker is to be the primary means of naming the contents of the pipe. The name is to be brief, yet complete or in understood abbreviated format. Arrows are to accompany the legend to indicate the directional flow of the contents. Additional information may be necessary to identify the content details such as pressure and temperature.

### Installation recommendations:

- Above or below centre visual line of pipe
- Frequent intervals on straight pipe runs (visible from any point along the length)
- Close to valves
- Near branches and T's in piping
- Any change in direction of piping
- Near points before and after pipe going through walls, ceilings, and floors

29 CFR 1910.253 Oxygen-fuel gas welding and cutting (d)(4)(ii) Aboveground piping systems shall be marked in accordance with the American National Standard Scheme for the identification of piping systems, ANSI A13.1

1910.261 Pulp, paper, and paperboard mills (a)(3)

General incorporation of standards. Establishments subject to this section shall comply with the following standards:

1910.261(a)(3)(ii) Scheme for the identification of piping systems, A13.1

1910.262 Textiles

1910.262(c)(7) Identification of piping systems. Identification of piping systems shall conform to American National Standard A13.1

## LETTER HEIGHT & PIPE MARKER SIZES

The outside diameter of the pipe determines the letter height and background field length of the marker.

Outside Diameter of Pipe"	Length of Pipe Marker Colour Field"	Size of Letters"
3/4 to 1 1/4	8	1/2
1 1/2 to 2	8	3/4
2 1/2 to 6	12	1 1/4
8 to 10	24	2 1/2
Over 10*	32	3 1/2

\*Available as custom pipe markers

## LEGEND

The legend on the marker gives the name of the contents in full or abbreviated form. Arrows should be used to indicate direction of flow.

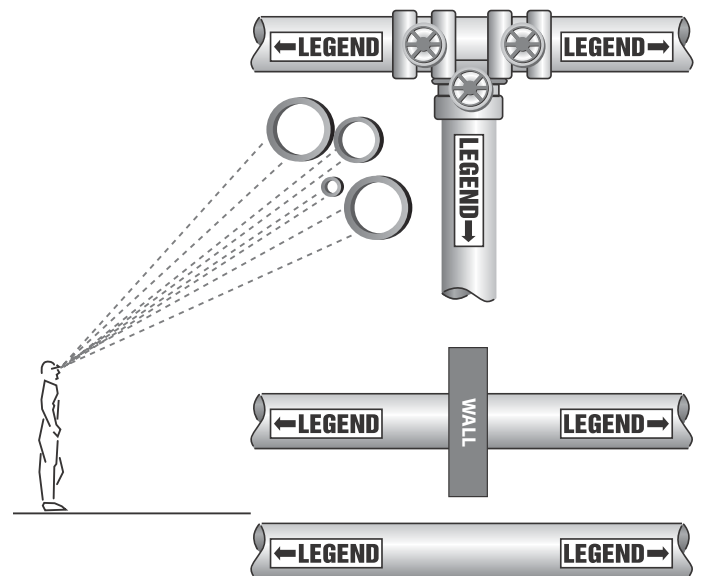

## COLOURS

Colours identify the characteristic hazards of the contents of the piping system.

Contents of the Pipe	Colour
Fire Quenching Fluids	WHITE ON RED
Toxic And Corrosive Fluids	BLACK ON ORANGE
Flammable Fluids	BLACK ON YELLOW
Combustible Fluids	WHITE ON BROWN
Potable, Cooling, Boiler Feed, And Other Water	WHITE ON GREEN
Compressed Air	WHITE ON BLUE

## VISIBILITY & LOCATION

Where pipe lines are located high or low, place the lettering below or above the horizontal centerline of the pipe. Affix markers onto piping close to valves or flanges and adjacent to changes in direction, branches, and where pipes pass through walls or floors; and at 25' to 50' intervals on long straight pipe runs.

Pipes installed at a distance may make pipe markers difficult to read (refer to the distance reading chart). We can provide larger, legible pipe markers to meet your requirements. Please contact us for solutions.

**ACCUFORM.**

## CGSP PIPE MARKERS

MARK PIPES TO IDENTIFY AND LABEL HAZARDOUS AND NON-HAZARDOUS SUBSTANCES CONTAINED IN PIPING SYSTEMS BY USING COLOUR, LEGEND, AND PICTOGRAM.

Create pipe markers based on the Canadian General Standard Board CAN/CGSB-24.3-92

The combination of text with Workplace Hazard Materials Information System (WHMIS) symbols provides an impact and quick understanding of the pipe contents.

Comply with the guidelines in marking pipes by providing workers and emergency personnel the ability to easily identify contents of pipes in the event the contents could release into the environment.

When WHMIS controlled substances are contained in piping systems, the appropriate WHMIS symbol(s) are to be included on the pipe marker with the legend.

### WHMIS SYMBOLS:

## THE GLOBALLY HARMONIZED SYSTEM (GHS)

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS) is an international system established by the United Nations to replace pre-existing classification and labeling methods. GHS presents a unified code to eliminate discrepancies in labeling conventions from one country to another. Using a harmonized standard reduces the chance of misinterpretation or confusion, thereby increasing safety regardless of the language spoken or even the level of literacy of those working with the substances.

It covers the following:

- Classification of physical health and environmental hazards
- Labeling environments
- Universal symbols and pictograms
- Hazard warning statements, aspiration hazards
- Signal word for type of hazard
- Safety data sheet format

The risk of chemical exposure lurks at any stage; be it production, transport, handling or use. Incomplete or ambiguous data can be not only dangerous but have a negative impact on productivity. As such, GHS is designed to protect the environment as well as workers, consumers, transport workers, and emergency responders.

One of the other aims of GHS is to improve and expand international knowledge of the chronic health hazards of chemicals and thereby reduce, eliminate and/or replace these chemicals. Due to the complex nature of this domain, the GHS is constantly being modified and revised. Effective date is proposed to be two years after publication of final rule passage by Congress. For this reason, it's important to contact one of our experts to stay abreast of the latest GHS developments and how they affect you.

## WHMIS REQUIREMENTS

The Workplace Hazardous Material Information System (WHMIS) is enforced nationwide. It was developed as a way of protecting workers from the adverse effects of hazardous materials in the workplace. WHMIS gives both the employers and employees the right to know about hazards associated with chemicals they work with. This is accomplished through the use of Material Safety Data Sheets (MSDS), proper labelling and training.

### Material Safety Data Sheets must:

1. Accompany every shipment of hazardous material.
2. Be kept on file and be accessible to all employees.
3. Be updated and revised every 3 years.

### Must contain the following information (as a minimum):

- Hazardous ingredients
- Preparation information
- Product information
- Physical data
- Fire or explosion data
- Reactivity data
- Toxicological properties
- Preventative measure
- First aid measures

### Supplier label must:

1. Be supplied by the manufacturer of the chemical.
2. Be applied to every container of hazardous material.
3. Have the distinct Hash border.

### Must contain a total of 7 pieces of information:

- Product identifier
- Supplier identifier
- Hazard symbol
- Risk phrase
- Precautionary measures
- First Aid measures
- Reference to MSDS

### Workplace labels are required:

1. When the supplier label has been damaged or fallen off.
2. When transferring chemical from the original container to a smaller one.
3. To contain at least 3 pieces of information:
  - Product identifier
  - Precautionary measure
  - Reference to MSDS

### Training is an important part of WHMIS. Training must cover such things as:

- How to read and understand labels and MSDS
- Procedures for safe use, storage, handling and disposal of hazardous material
- Procedures to be followed in case of emergency

Every employee who comes in contact with hazardous material must be trained

## WHMIS AFTER GHS

The original WHMIS is not being replaced but rather updated to align as closely as possible with the United States and other key trading partners. The new WHMIS will be called "WHMIS 2015".

- Best interlocking system – angular LockSafe® interlocking system provides a stronger connection, yet the tiles easily "zip" apart for re-positioning
- Exceptional comfort – ergonomic design and PVC formula dramatically reduce fatigue and lead to increased productivity
- Easy ramp system – one ramp fits both "male" and "female" edges
- No-fuss installation – just snap the tiles together and configure to fit your exact work spaces
- Outstanding value for your cost reduction initiatives – save on replacement costs, installation time, and employee lost time
- Thickness: 5/8"

- Unlike other modular ergonomic flooring systems, large installations of F.I.T.™ can be rolled-up for quick cleaning, repositioning or storage
- It's amazing LockSafe® interlocking system works like flexible hinges to hold tiles together even when large connected sections are tightly rolled
- F.I.T.™ is designed for onsite customization - the tiles can be cut every 3" and still connect
- Just cut the tiles and reconnect for a seamless installation
- This unique feature makes F.I.T.™ the most versatile interlocking tile on the market and facilitates total coverage of areas with multiple work centres and equipment with unusual shapes

**SOLID** – for use in dry areas

**OPEN** – for use in wet areas - surface slants toward holes to facilitate drainage

## CHOOSING THE RIGHT MAT

There are three types of matting to consider. To select the right type for you, we recommend following these steps:

1. Identify the type of area where you wish to install the carpet, taking into account the amount of traffic it will experience. (ex: heavy traffic vs. light traffic)
2. Refer to the collection of products in the following pages and locate the right fit for you. We've categorized each mat to correspond to one of the four traffic categories, colour coded for your convenience
3. Choose a scraper, a wiper/scraper and a wiper mat. Note: for best results, use three types of mats in the following combination (ex: Upfront Scraper, Super Soaker and Proluxe)

### 1-SCRAPER

- Exterior usage or between two doors
- Aggressive scraper surface, which will capture the majority of dirt from the soles of shoes
- Does not absorb moisture, which facilitates maintenance

### 2-WIPER/SCRAPER

- Interior usage or between two doors
- Irregular surface which enables trapping moderate dirt that was not captured at the scraper level
- Moderately retains water and moisture that may later evaporate or be extracted at a later time

### 3-WIPER

- Interior usage
- Plays a major role in the retention of water and fine dust
- Minimizes the risk of slipping and falling

The proper use of entrance mats is recognized by the Green Building Council of Canada, under LEED® certification system (Leadership in Energy and Environmental Design), visioning a transformed built environment leading to a sustainable future. Some Mat Tech products can contribute to obtaining 2 credits:

1 Credit\*: "Permanently use the entrance matting system to capture dirt, particles etc. from entering the building at all high volume entrances"

1 Credit\*\*: Use material with recycled content in order that the sum [...] constitutes at least 7.5% of the total value of the material in the project.
